OPERATIONS REPORTS ............................................................................... 16
FINANCIAL STATEMENTS .......................................................................... 51
MESSAGE FROM THE CHAIRPERSON

I am delighted to share the Zambezi River Authority’s 2019 Annual Report and Financial Statements which shows how the Authority delivered against its just ended five-year Corporate Strategic Plan and the role it played in contributing to the socio-economic development of the Contracting States through, among other areas, a sustainable and secure energy provision to all its shareholders and stakeholders. For the last 33 years, the Authority has been discharging its statutory obligations and transforming its operations so as to remain relevant and as such, the year 2019 was no different.

The Authority’s financial performance reflects the increasing global economic complexities and the challenges we must solve. Further, the Authority’s growth also allows it to continue to serve and to deliver on its mandate through embracing new technology and new business models.

BUDGET PERFORMANCE REVIEW

During the year under review, the Authority achieved operating income of US$24.15 million compared with the budget of US$22.03 million giving rise to a favorable variance of 10%. This was as a result of the over-utilisation of water by the two Utilities, ZESCO Limited and Kariba Hydro Power Company (KHPC). The combined water utilisation was 36.02 Billion Cubic Metres (BCM) against an allocation of 34.00 BCM.

Furthermore, the operating expenditure was US$24.77 million against a budget of US$39.72 million resulting in a favorable variance of 37%. The under-expenditure was mainly due to non-execution of certain activities. Which could not be undertaken on account of liquidity challenges which the Authority was facing. The said activities which could not be undertaken due to liquidity challenges were under the following expenditure lines: Communication and Public Relations, Seminars and Workshops, Training and Development, Information and Communication Technology, Joint Operations Technical Committee and Project Management costs.

The adverse liquidity situation arose from non-settlement of water sales invoices by the two Utilities and the foreign exchange control regulations that restricted access to Authority funds that were held in commercial banks in Zimbabwe.

The total receivables from the two Utilities amounted to US$34.29 million while the restricted cash in Zimbabwe was US$19.64 million, bringing the total amount of funds the Authority was not able to access to US$53.93 million. The Authority’s liquidity ratio continued to show a very good outlook of 2.45 times of current assets which could cover current liabilities. However, when the inaccessible funds mentioned above are removed, the Acid test ratio, showed a paltry 0.02 times or only about 2% of the current liabilities that could be covered by the current assets, which well described the precarious liquidity situation the Authority was facing. The Authority continued to engage ZESCO Limited and KHPC with a view to ensuring that the Utilities settled the outstanding obligations.

As a result of the adverse liquidity situation, the Authority was unable to meet its critical expenditure as it could not fully execute its 2019 budget.

Further, the Authority was unable to pay employees in Zambia their retrenchment packages and failed to settle scheduled loan repayments under the Kariba Dam Rehabilitation Project (KDRP). The said loans were contracted from the World Bank’s International Development Association (IDA) and the African Development Bank (AfDB) by the Government of the Republic of Zambia and on-lent to the Authority.

MAINTENANCE OF KARIBA DAM

A sustained structural integrity and safety of the Kariba Dam and reservoir remained the pivotal aspiration of the Authority. In that regard, routine and preventative maintenance programmes for the dam and its appurtenances,
including; collection, analysis and reporting of data from the dam safety monitoring instrumentation at the Kariba Dam continued during the review period as prescribed in the Standing Operations Procedures (SOP) manual as per best practice.

A bi-annual inspection of the dam meant to ensure that the infrastructure was safe, was carried out in February 2019. This was aimed at evaluating the state of the dam in accordance with the requirements of the SOP. A detailed assessment of the dam galleries, spillway and associated hydro-electromechanical equipment, dam plinths, South Bank complex and dam monitoring instruments was undertaken.

IMPLEMENTATION OF THE KARIBA DAM REHABILITATION PROJECT (KDRP)
The period under review saw the progressive implementation of the two components of the KDRP aimed at ensuring the long-term safety and reliability of Kariba dam as follows;

(a) Plunge Pool Reshaping
The construction of the permanent access road on the north bank tailrace platform was completed and subsequently utilized to facilitate passage of the 130-tonne crane for use upstream of the tailrace outfalls. The excavation of the lift platform foundations by underwater blasting was in progress. All the 41 cofferdam stop logs and the associated built-in parts were transported from the manufacturing factory, Trident Steel of South Africa to site. The targeted date for completion of the reshaping of the plunge pool remained as December 2021.

(b) Spillway Refurbishment
The spillway refurbishment contract was signed on 24th May 2019 and the contractor moved to site on 21st October 2019 in readiness for undertaking the refurbishment of the six spillway gates for the Kariba Dam. The Authority received the programme of works as well as the quality management plan. The project was scheduled to be completed by December 2023.

HYDROLOGICAL OUTLOOK AND RESERVOIR OPERATIONS AT KARIBA
The rainfall received during the 2018/2019 season was 60% below normal and this impacted negatively on the total inflows into Lake Kariba. The season’s inflows were 36% higher than the worst year on record (1995/1995) but below that of the previous four years. The recorded river flows from the upper Kariba catchment gauging stations were 70% below the flows of 2018 thereby giving a continued grim picture at the end of the year.

Lake Levels at Kariba
The lake level at Kariba continued to recede, dropping by 5.66m from January to December 2019. It dropped from a lake level of 482.35m recorded on 1st January 2019 to 476.69m recorded on 31st December 2019 which was 1.19m above the minimum operating level of 475.5m. The stored usable water on 31st December 2019 was 7.62 Billion Cubic Metres (BCM) or 12% of live storage in comparison to 38.66 BCM or 60% of live storage recorded on the same date in 2018.

Water Allocation and Utilisation for Power Generation at Kariba Dam
The Authority initially allocated the two power utilities, ZESCO Limited and Zimbabwe Power Company (ZPC), a combined total of 38 BCM of water for power generation for the year 2019. Due to the poor rainfall performance in the Zambezi catchment which was contrary to what had been forecasted, the allocation was revised downwards to 36 BCM on 1st March 2019. Another downward revision to 34 BCM was effected on 1st April 2019 in order to ensure continued availability of water for power generation in view of the poor rainfall performance.

By the close of the year 2019, the ZESCO Limited operated Kariba North Bank power station had utilised 18.75 BCM of water which was 1.75 BCM (10.30%) above allocation while the ZPC operated Kariba South Bank power station had utilised 17.27 BCM which was 0.27 BCM (1.59%) above allocation. The utilisation above allocation by ZESCO Limited at its Kariba North bank power Station attracted water tariff penalties due to the fact that it utilized above the threshold limits provided for in the Water Purchase Agreement.

IMPLEMENTATION OF THE 2400MW BATOKA GORGE HYDRO-ELECTRIC SCHEME (BGHES)
The Authority continued to implement activities for the development of the BGHES which included the following:
(a) Land Acquisition
The land on which the Batoka Dam, the two power houses, the offices, employee townships and all other auxiliary infrastructure will be developed comprised 2700 hectares on the north bank and 3000 hectares on the south bank. The Authority made significant progress regarding the land acquisition process for the project infrastructure in both Contracting States.

(b) Roadmap for the development of the BGHES
The Authority convened an inaugural meeting between the Project Steering Committee (PSC) and the selected developer for the scheme, namely, the Consortium of Power Construction of China Limited (POWERCHINA) and General Electric from 6th to 7th August 2019 for purposes of agreeing on a road map for the development of the project infrastructure.

ENHANCEMENT OF THE AUTHORITY’S CORPORATE IMAGE

Media Coverage
The Authority received media coverage from national, regional and international media as well as online publications which were mainly positive. The year opened with a 9.4% coverage which peaked in July to 52% and closed off the year at 37%. The coverage was mainly due to the on-going developmental activities and associated publicity efforts on the part of the Authority regarding the implementation of the Kariba Dam Rehabilitation Project and the Batoka Gorge Hydro-Electric Scheme.

Implementation of projects under the Zambezi Valley Development Fund (ZVDF)
The Authority continued in its effort to collaborate with the displaced Tonga/Kore-Kore people by expending 2% of its water sales revenue and another 2% of the electricity revenue collected by the power utilities for the implementation of projects aimed at enhancing the displaced communities’ socio-economic development. Based on the approved projects submitted by the communities, several development projects were carried out as follows:

Zambia
1. Rehabilitation of the Lusitu water supply scheme, Chirundu District,
2. Construction of a classroom block at Nkandazovu Basic School, Kalomo District,
3. Monitoring the performance and carrying out maintenance works for Phase 1 and 2 of the Mundulundulu water reticulation system, Siavonga District,
4. Construction of a classroom block at Manchamwya Primary School, Siavonga District,
5. Construction of a classroom block at Sinafala Secondary School, Gwembe District,
6. Installation of solar systems at five (5) health centres in Sinazongwe District namely:
   7. Kafwambila Clinic
   8. Sulwegondwe Clinic
   9. Sameja Clinic
   10. Muziyo Clinic, and
   11. Muzyo Clinic

Phase 1 and 2 of the construction of the superstructures at Njabalombe Rural Health Centre, Zimba District, and the donation of a Motorcycle to the Hamatuba clinic, Gwembe District, were also accomplished during the period under review.

Zimbabwe
1. Construction of a classroom block at Chikango Primary School, Gokwe North District,
2. Construction of a classroom block at Kushinga Primary School, Gokwe North District,
3. Connection of power supply at Chiroti Clinic, Hurungwe District,
4. Construction of a classroom block at Chisipite Primary School, Hurungwe District,
5. Construction of a superstructure at Chidyamugwamu Clinic, Nyami Nyami District, and
6. Construction of a classroom block at Ntibvule Primary School, Binga District.

CHANGES IN CORPORATE GOVERNANCE
On behalf of the Board of Directors of the Zambezi River Authority, may I take this opportunity to thank the outgoing members of the Council of Ministers - Hon. Margaret Mwanakatwe, MP, Zambia’s former Finance Minister and Hon. Joram Gumbo, MP Zimbabwe’s former Energy and Power Development Minister. Furthermore, the Authority bade farewell to the former Chairperson / Co-Chairperson of the Board of Directors, Zambia’s Permanent Secretary in the Ministry of Energy, Brigadier-General Emeldah Chola, Rtd.
I also wish to extend a warm welcome to new members of the Council of Ministers—Hon. Bwalya Ng’andu MP, Zambia’s Finance Minister and Hon. Fortune Chasi, MP Zimbabwe’s Minister of Energy & Power Development. I also wish to welcome Mr Trevor Kaunda, Permanent Secretary in the Ministry of Energy in Zambia to the Authority’s Board of Directors as Chairperson /Co-Chairperson.

ACKNOWLEDGEMENTS
As the Authority continues to strive to make a positive economic and social impact in the Contracting States of Zambia and Zimbabwe, may I, on behalf of the Council of Ministers and the Board of Directors, express our sincere and profound gratitude and appreciation to our cooperating partners, stakeholders, management and staff for their role in facilitating the realisation of the Authority’s goals and objectives during the year 2019.

Trevor Kaunda
Chairperson, Zambezi River Authority Board of Directors
Permanent Secretary, Ministry of Energy
ZAMBIA
The Zambezi River Authority was established as a body corporate on 1st October 1987 by parallel legislation in the Parliaments of Zambia and Zimbabwe following the reconstitution of the Central African Power Corporation (CAPCO).

The Authority is jointly and equally owned by the governments of Zambia and Zimbabwe.

The Authority’s primary function is to operate, maintain, monitor and regulate the water level in the Kariba Dam reservoir. It is also mandated to construct, operate, monitor, and maintain any other dams on the Zambezi River and to collect, accumulate and process hydrological and environmental data of the Zambezi River for better performance of its functions and for any other purpose beneficial to the Contracting States.

**KEY STRATEGIC FUNCTIONS**

The following are the key strategic functions of the Authority.

a). The operation, monitoring and maintenance of the Kariba Complex.

b). In consultation with the national electricity undertakings, investigate the desirability of constructing new dams on the Zambezi River and make recommendations thereon to the Council of Ministers (COM).

c). To construct, operate, monitor and maintain any other dams on the Zambezi River.

d). To collect, accumulate and process hydrological and environmental data of the Zambezi River for the better performance of its functions and for any other purpose beneficial to the Contracting States.

e). Regulate the water level in the Kariba reservoir and any other reservoirs owned by the Authority.

f). Submit development plans and programmes to the COM for approval.

The Authority is the only dam management organisation serving two states within the Zambezi River basin. The Authority generates its revenue from the sale of water from the Kariba Dam which is used for power generation by ZESCO Limited in Zambia and Zimbabwe Power Company in Zimbabwe.

**EXISTING AND POTENTIAL HYDRO-ELECTRIC POWER SITES ON THE ZAMBEZI RIVER**

![Diagram of existing and potential hydro-electric power sites on the Zambezi River]
OUR MISSION
To satisfy all stakeholders through purposefully and sustainably exploiting the natural advantages of the Zambezi River.

OUR VALUES
Fairness | Respect | Integrity | Transparency | Healthy and Safety | Professionalism

OUR VISION
To be a dynamic vibrant organization inspired by our passion to harness and manage the Zambezi waters for socio-economic development.

OUR 2015 TO 2019 STRATEGIC OBJECTIVES

Goal 1:
To secure the long term safety and reliability of the Kariba Complex by December 2022.

Goal 2:
To increase the utilisation of the Zambezi River through the commencement and further development of the two additional Hydro-Electric Schemes by 2019.

Goal 3:
To attain long term organisational sustainability and viability through improved operational efficiency and effectiveness.

Goal 4:
To have a positive corporate image for the Authority by 31 December 2019.

Goal 5:
To establish a Monitoring and Evaluation mechanism that would ensure effective implementation of the Corporate Strategic Plan.

Mukunganyika Environmental Boat
COUNCIL OF MINISTERS

The Zambezi River Authority is governed by a Council of Ministers (COM) consisting of four ministers, two of whom represent the Government of the Republic of Zambia while the other two represent the Government of the Republic of Zimbabwe.

The ministers designated as members of COM are those who hold the portfolios of Energy and Finance in the Contracting States.

According to the ZRA Acts, the chairpersonship of the COM is held alternately by the ministers responsible for Energy in the Governments of Zambia and Zimbabwe. For the year under review, Zambia held the chairpersonship of COM.
THE BOARD OF DIRECTORS

The Authority’s Board of Directors is composed of two permanent secretaries with the energy portfolios and two permanent secretaries with the finance portfolios in the two Contracting States. In addition, the Board also comprises one independent member from each Contracting State. The Board is chaired alternately by the Energy Permanent.

Mr. Trevor Kaunda
Board Chairperson
Permanent Secretary-Ministry of Energy, Zambia
Appointed: 3rd September 2019

Dr. Gloria S. Magombo
Board Co-Chairperson
Secretary - Ministry of Energy & Power Development
Zimbabwe

Mr. Mukuli Chikuba
Permanent Secretary
Ministry of Finance
Zambia

Mr. George T. Guvamatanga
Secretary
Ministry of Finance & Economic Development
Zimbabwe

Mr. Pascal Mubanga
Independent Board Member
Zambia

Eng. Israel Rwodzi
Independent Board Member
Zimbabwe

Brig. Gen. (Rtd) Emeldah Chola
Board Chairperson
Permanent Secretary-Ministry of Energy, Zambia
Retired on 3rd September 2019
The Remuneration and Compensation Policy is provided in the Board Charter as follows:

(a) Each member of the Board shall be paid out of the funds of the Authority such remuneration and allowances, if any, as the Council of Ministers may determine.

(b) Currently, Board Members are paid a quarterly fee determined and approved by the Council of Ministers and a variable fee per each meeting. The Chairperson and the Co-Chairperson are paid amounts which are higher than the rest of the Members in order to compensate for the increased responsibilities that they perform.

(c) In addition, a fixed sum subsistence allowance is paid to Board Members when they attend meetings held outside their hometowns.

The total remuneration and compensation availed to Board members during the year 2019 was US$268,447.83

The Board recognises that in this global and complex business environment, demand on the Board’s time continues to increase thereby necessitating the need to delegate issues to specialist Board Committees.

In this regard, the Board Charter in Articles 26, 27 and 28 provides for the establishment of three (3) Board Committees as follows:

(a) **Finance, Human Resource and Remuneration**

The Committee has been charged with the prime responsibility of reviewing accounting systems and financial reporting in order to safeguard the Authority’s assets, monitor the competence with which the Budget activities are carried out and recommend to the Board measures that would ensure the Authority’s continued viability.

The Committee has also been mandated to review and recommend to the Board, comprehensive policies and strategies relating to the remuneration and terms and conditions of employment of employees, succession planning, training and development and separations.

The Committee has further been charged with the prime responsibility of reviewing and recommending Executive Management employees’ and Director’s remuneration policies by ensuring that such policies remain relevant in attracting, retaining and motivating both Executive Management employees and Directors.

**During the year 2019, the Committee had the following members:**

1. Mr. Mukuli Chikuba – Permanent Secretary, Ministry of Finance, Zambia
2. Mr. George T. Guvamatanga – Secretary, Ministry of Finance & Economic Development, Zimbabwe
The Remuneration and Compensation Policy is provided in the Board Charter as follows:

(a) Each member of the Board shall be paid out of the funds of the Authority such remuneration and allowances, if any, as the Council of Ministers may determine.

(b) Currently, Board Members are paid a quarterly fee determined and approved by the Council of Ministers and a variable fee per each meeting. The Chairperson and the Co-Chairperson are paid amounts which are higher than the rest of the Members in order to compensate for the increased responsibilities that they perform.

(c) In addition, a fixed sum subsistence allowance is paid to Board Members when they attend meetings held outside their hometowns.

REMUNERATION AND COMPENSATION FOR THE YEAR 2019

The total remuneration and compensation availed to Board members during the year 2019 was US$268,447.83.

BOARD COMMITTEES

The Board recognises that in this global and complex business environment, demand on the Board’s time continues to increase thereby necessitating the need to delegate issues to specialist Board Committees.

In this regard, the Board Charter in Articles 26, 27 and 28 provides for the establishment of three (3) Board Committees as follows:

(a) Finance, Human Resource and Remuneration
   The Committee has been charged with the prime responsibility of reviewing accounting systems and financial reporting in order to safeguard the Authority’s assets, monitor the competence with which the Budget activities are carried out and recommend to the Board measures that would ensure the Authority’s continued viability.

   The Committee has also been mandated to review and recommend to the Board, comprehensive policies and strategies relating to the remuneration and terms and conditions of employment of employees, succession planning, training and development and separations.

   The Committee has further been charged with the prime responsibility of reviewing and recommending Executive Management employees’ and Directors’ remuneration policies by ensuring that such policies remain relevant in attracting, retaining and motivating both Executive Management employees and Directors.

   During the year 2019, the Committee had the following members:
   1. Mr. Mukuli Chikuba – Permanent Secretary, Ministry of Finance, Zambia
   2. Mr. George T. Guvamatanga – Secretary, Ministry of Finance & Economic Development, Zimbabwe

(b) Audit, Risk Management and Corporate Governance
   The Committee reviews accounting systems and financial reporting in order to safeguard the Authority’s assets, monitor the competence with which external audits are carried out and ensure that the Auditor’s recommendations are given due consideration.

   In order to improve performance, the Board has to understand how to better manage risk. The Committee is therefore charged with the duty and responsibility of ensuring that the Authority has appropriate risk management systems and that the Board understands the key risk factors, their likely impact on Authority operations as well as how well the risk mitigation factors are working.

   Further, the duty and responsibility of the Committee in relation to Corporate Governance is to ensure sound corporate governance structures and systems in the Authority, consider and deliberate on matters relating to the Board and individual Board Members, including appointments, induction, training and development and Board Procedures.

   During the year 2019, the Committee had the following members:
   1. Mr. Pascal Mubanga – Independent Board Member, Zambia
   2. Eng. Israel Rwodzi – Independent Board Member, Zimbabwe
   3. Mr. David Kalaba – Independent Committee Member, Zambia
   4. Ms Tariro Mpuka, Independent Committee Member, Zimbabwe

(c) Technical and Projects
   The Committee is mandated to discharge the prime responsibility of reviewing technical issues arising from the two (2) engineering departments of the Authority being the Projects and Dam Management Services Department and Water Resources and Environmental Management Department, including reports issued by the Authority’s consultants. The Committee also makes necessary recommendations to the Board on all technical issues.

   During the year 2019, the Committee had the following members:
   1. Mr. Pascal Mubanga - Independent Board Member, Zambia
   2. Eng. Israel Rwodzi - Independent Board Member, Zimbabwe
   3. Eng. Victor Mundende – Managing Director, ZESCO Limited

1.0 Gauging Stations Utilised During The Year 2020

One of the functions of the Authority is to collect and process hydrological data of the Zambezi River and its tributaries for sustainable management of the Kariba Dam and any infrastructure along the river. To this end, the Authority operates and maintains 15 hydrometric stations in the Kariba catchment for monitoring the river flows and the Kariba reservoir operation.

The stations are depicted in figure 1.1 and further listed in table 1.1 below.

2.0 Rainfall Performance during the 2018/2019 Season

The 22nd Annual Southern Africa Regional Climate Outlook Forum (SARCOF-22), held in Lusaka, Zambia from 22nd to 24th August 2018 projected that the SADC Region would receive normal to below-normal rainfall in January-February-March 2019, while dry conditions would be experienced across the SADC region.

Some parts of the region such as southern Angola, northern and southern Botswana, northern Namibia, north-western South Africa, southern and western Zambia, and north-western Zimbabwe received the lowest seasonal rainfall since 1981 (Nana Dlamini, 2019, SADC Secretariat Disaster Risk Reduction Unit). Figure 2.1 below shows the extent of the affected areas in the SADC region during the 2018/19 Rainfall Season.

2.0 Rainfall Performance during the 2018/2019 Season

The 22nd Annual Southern Africa Regional Climate Outlook Forum (SARCOF-22), held in Lusaka, Zambia from 22nd to 24th August 2018 projected that the SADC Region would receive normal to below-normal rainfall in January-February-March 2019, while dry conditions would be experienced across the SADC region.

Some parts of the region such as southern Angola, northern and southern Botswana, northern Namibia, north-western South Africa, southern and western Zambia, and north-western Zimbabwe received the lowest seasonal rainfall since 1981 (Nana Dlamini, 2019, SADC Secretariat Disaster Risk Reduction Unit). Figure 2.1 below shows the extent of the affected areas in the SADC region during the 2018/19 Rainfall Season.
3.0 2019/2020 Regional Climate Seasonal Forecast

The 23rd Annual Southern Africa Regional Climate Outlook Forum (SARCOF-23), held in Luanda, Angola from 28th to 30th August 2019 presented a consensus outlook for the 2019/2020 rainfall season over the SADC region indicated Figure 3.1 as follows:

- The bulk of the SADC region would receive normal to above-normal rainfall for most of the period October to December (OND) 2019, with northern Mozambique, southern Tanzania, Northern Malawi, northern-most Zambia, the bulk of the DRC, north-western half of Angola, northern Madagascar and Comoros where normal to below-normal rainfall was expected.

- January to March (JFM) 2020, normal to above normal rainfall was expected for most parts of the region. However, the eastern half of Tanzania, eastern half of Botswana, westernmost parts of Namibia, the bulk of South Africa, bulk of Mozambique, southern Malawi, eastern Lesotho, central Zambia, southernmost Madagascar, south-western most Angola, Eswatini and Zimbabwe were more likely to receive normal to below normal rainfall.

![Figure 3.1: Rainfall Forecast for SADC Region, October 2019 – March 2020](Courtesy: SARCOF-23, 28th August 2019, Luanda, Angola)

![Figure 3.2: Down-scaled Rainfall Forecast for Zambia for October 2019 – March 2020](Courtesy: Zambia Meteorological Department, Lusaka)
The 23rd Annual Southern Africa Regional Climate Outlook Forum (SARCOF-23), held in Luanda, Angola from 28th to 30th August 2019 presented a consensus outlook for the 2019/2020 rainfall season over the SADC region indicated Figure 3.1 as follows:

- The bulk of the SADC region would receive normal to above-normal rainfall for most of the period October to December (OND) 2019, with northern Mozambique, southern Tanzania, Northern Malawi, northern-most Zambia, the bulk of the DRC, north-western half of Angola, northern Madagascar and Comoros where normal to below-normal rainfall was expected.

- January to March (JFM) 2020, normal to above normal rainfall was expected for most parts of the region. However, the eastern half of Tanzania, eastern half of Botswana, westernmost parts of Namibia, the bulk of South Africa, bulk of Mozambique, southern Malawi, eastern Lesotho, central Zambia, southernmost Madagascar, south-western most Angola, Eswatini and Zimbabwe were more likely to receive normal to below normal rainfall.

The above forecast was replicated in the down-scaled forecasts for the respective Meteorological Departments of both Zambia and Zimbabwe which indicated that the larger part of the Kariba Catchment would experience **Normal to Above-Normal** Rainfall during the 2019/2020 Rainy Season for the period October to December 2019 with **Normal to Below Normal** rainfall during the second half of January – March 2019 for the lower Kariba catchment. Figure 3.2 and 3.3 below depicts downscaled scenarios for the 2019/20 rainfall season across Zambia and Zimbabwe.
Long term mean rainfall for October-November-December (1981-2010)

Seasonal outlook for October-November-December

All Authority’s hydrometric stations on the Kariba Catchment recorded below average flows during the 2018/19 hydrological season. Chavuma gauging station, which is about 12km downstream of the Zambezi River from the point the Zambezi River re-enters Zambia from Angola, recorded flows which were lower than both the long-term average and those of the previous season.

The Victoria Falls station (considered as the Main Inflow Station to Lake Kariba), peaked at 1,175m³/s on 8th May 2019. The peak was only 25% of the previous year’s peak of 4,675 m³/s which was recorded on 16th May 2018.

For the period 1st October 2018 to 30th September 2019, **17.542 Billion Cubic Meters (BCM)** was recorded to have passed the Victoria Falls station; an amount still below the long-term average of 35.081 BCM, but however greater than 12.274 BCM recorded during the same period during the 1995/96 season.
All Authority’s hydrometric stations on the Kariba Catchment recorded below average flows during the 2018/19 hydrological season. Chavuma gauging station, which is about 12km downstream of the Zambezi River from the point the Zambezi River re-enters Zambia from Angola, recorded flows which were lower than both the long-term average and those of the previous season.

The Victoria Falls station (considered as the Main Inflow Station to Lake Kariba), peaked at 1,175 m³/s on 8th May 2019. The peak was only 25% of the previous year’s peak of 4,675 m³/s which was recorded on 16th May 2018.

For the period 1st October 2018 to 30th September 2019, 17.542 Billion Cubic Meters (BCM) was recorded to have passed the Victoria Falls station; an amount still below the long-term average of 35.081 BCM, but however greater than 12.274 BCM recorded during the same period during the 1995/96 season.

5.0 Lake Levels

The Lake level at Kariba dropped by 5.66m from 482.35m, recorded on 1st January 2019 to 476.69m, recorded on 31st December 2019 and was just 1.19m above the minimum operating level (MOL).

The stored usable water in Lake Kariba on 1st January 2019 was 32.16 BCM (49.63% of live storage) and 5.33 BCM (8.23% of live storage) on 31st December 2019. In 2018 the lake closed with 32.32 BCM or 49.88% of live storage.

Figure 5.1 below shows lake level hydrographs for various past rainy seasons in comparison with the 2019/2020 and 2018/19 seasons. Figure 5.2 further depicts variations of end-of-month reservoir levels since impoundment in 1961 to December 2019.
6.0 Operating of Spillways
The spillway gates at the Kariba Dam remained closed during the period under review as the reservoir level remained way below the flood rule curve and hence no spilling was conducted.

7.0 Water Balance
The total inflow into Lake Kariba during 2019 was 18.84 BCM, a drop of about 70% from the 2018 record of 61.79 BCM. The lower catchment contribution accounted for 16% inflow into the lake while 84% was from the upper Zambezi catchment.

On the other hand, the total outflow from the lake was 45.81 BCM, comprising 36.02 BCM turbine discharge and 9.79 BCM lost due to evaporation. The net effect on the reservoir was a storage decrease of 26.97 BCM.

Table 7.1 and figure 7.1 below gives the annual water balance of Lake Kariba for 2019 compared with the two preceding years. Figure 7.2 provides a schematic representation of the monthly water balance dynamics for 2019. Figure 7.3 provides historical water balance data.
The spillway gates at the Kariba Dam remained closed during the period under review as the reservoir level remained way below the flood rule curve and hence no spilling was conducted.

7.0 Water Balance

The total inflow into Lake Kariba during 2019 was 18.84 BCM, a drop of about 70% from the 2018 record of 61.79 BCM. The lower catchment contribution accounted for 16% inflow into the lake while 84% was from the upper Zambezi catchment.

Figure 7.3: Lake Kariba Water Balance 1962 - 2019 (All Volumes in Milliards)
8.0 Water Usage and Energy Generation at Kariba

The climatic challenges over the Zambezi catchment that negatively impacted and resulted in low inflows into Lake Kariba made it imperative for the Zambezi River Authority to reduce the 2019 water allocation for energy generation at the Kariba Dam from the initial 38BCM to 36 BCM and finally 34 BCM in April 2019 and hence providing for a combined generation of 750MW for the period April to December 2019. Table 8.1 below displays water usage statistics at the Kariba complex during the period January – December 2018.

ZESCO Limited utilised 10.30% above its annual water allocation while Zimbabwe Power Company (ZPC) utilised 1.59% above its 2019 annual water allocation.
The climatic challenges over the Zambezi catchment that negatively impacted and resulted in low inflows into Lake Kariba made it imperative for the Zambezi River Authority to reduce the 2019 water allocation for energy generation at the Kariba Dam from the initial 38BCM to 36BCM and finally 34BCM in April 2019 and hence providing for a combined generation of 750MW for the period April to December 2019. The above information is further illustrated in figure 8.1.
1. Environmental Monitoring and Management Programme

During the year 2019, the Authority implemented its Environmental Management Programme (EMP) aimed at meeting its environmental monitoring objectives provided for under both the Zambezi River Authority Acts and the 2015-2019 Corporate Strategic Plan.

The activities that the Authority undertook included:

a) Water quality monitoring and testing of water samples from Lake Kariba and the Zambezi River and its tributaries confirming the samples’ compliance against the Authority’s Water Quality Guideline provisions. Analysis was done to check the status of water temperature, pH, electrical conductivity, dissolved oxygen, total alkalinity, total suspended solids, total dissolved substances and heavy metals content, among others.

b) Water hyacinth monitoring through physical observation at various locations and noted hot spots along the lake environment.

1.1 Environmental Monitoring Operational Domain

Figures 1.1, 1.2 and 1.3 below show the Authority’s operational domain and stations used to carry out the environmental monitoring programme. Figure 1.1 is a map of the Zambezi River Basin showing the location of the Authority’s water sampling stations. Figure 1.2 shows the sampling sites on Lake Kariba corresponding to the five (5) hydro-geographic sub-basins. Figure 1.3 highlights the sub-basin of importance – the Kariba Eastern Basin (Basin 5), being the most downstream end of the lake.
ENVIRONMENTAL MONITORING AND MANAGEMENT

1. Environmental Monitoring and Management Programme

During the year 2019, the Authority implemented its Environmental Management Programme (EMP) aimed at meeting its environmental monitoring objectives provided for under both the Zambezi River Authority Acts and the 2015-2019 Corporate Strategic Plan.

The activities that the Authority undertook included:

a) Water quality monitoring and testing of water samples from Lake Kariba and the Zambezi River and its tributaries confirming the samples' compliance against the Authority's Water Quality Guideline provisions. Analysis was done to check the status of water temperature, pH, electrical conductivity, dissolved oxygen, total alkalinity, total suspended solids, total dissolved substances and heavy metals content, among others.

b) Water hyacinth monitoring through physical observation at various locations and noted hot spots along the lake environment.

1.1 Environmental Monitoring Operational Domain

Figures 1.1, 1.2 and 1.3 below show the Authority’s operational domain and stations used to carry out the environmental monitoring programme. Figure 1.1 is a map of the Zambezi River Basin showing the location of the Authority’s water sampling stations. Figure 1.2 shows the sampling sites on Lake Kariba corresponding to the five (5) hydro-geographic sub-basins. Figure 1.3 highlights the sub-basin of importance – the Kariba Eastern Basin (Basin 5), being the most downstream end of the lake.

1.3 Water Hyacinth (Eichhornia Crassipes) Monitoring
Figure 1.3: Monitoring Stations in the Kariba Eastern Basin
Water Hyacinth (Eichhornia Crassipes) monitoring on Lake Kariba’s Eastern Basin was successfully conducted each month of 2019. For most hot spots around the lake, there was no significant manifestation of water hyacinth observed except for localised areas like Croc Farm and the University of Lake Kariba Research Station (ULKRS).

Figure 1.4 shows the local conditions observed at Gatche Gatche for highlighted months of 2019, where no weed manifestation was spotted.

1.3 Water Quality Data Collection and Processing
In line with its Environmental Monitoring Programme, the Authority undertook monthly, quarterly and semi-annual sampling activities on both the lake Kariba reservoir and its tributaries. Water quality data was generated to confirm the health status of the reservoir which was found to be in a healthy state supportive of aquatic ecosystem.

Below are some of the graphical and spatial maps of selected samples that were analysed.

1.3.1 Quarterly trend analysis for the Upper Catchment stations
Analysed trend data from the Upper Catchment stations for temperature and ammonia nitrogen shown in figure 1.5 and figure 1.6 below confirmed that both parameters were within the Authority’s quality guideline and hence indicating a healthy aquatic ecosystem.

1.3.2 Water quality analysis using spatial maps for Lake Kariba
Using the Geographic Information System, an assessment of the spatial variability of the water quality parameters on the lake was done in order to determine the water nutrient concentration distribution profile of sampled and analysed parameters.
Figure 1.3: Monitoring Stations in the Kariba Eastern Basin

Water Hyacinth (Eichhornia Crassipes) monitoring on Lake Kariba’s Eastern Basin was successfully conducted each month of 2019. For most hot spots around the lake, there was no significant manifestation of water hyacinth observed except for localised areas like Croc Farm and the University of Lake Kariba Research Station (ULKRS).

Figure 1.4 shows the local conditions observed at Gatche Gatche for highlighted months of 2019, where no weed manifestation was spotted.

1.3 Water Quality Data Collection and Processing

In line with its Environmental Monitoring Programme, the Authority undertook monthly, quarterly and semi-annual sampling activities on both the lake Kariba reservoir and its tributaries.

Water quality data was generated to confirm the health status of the reservoir which was found to be in a healthy state supportive of aquatic ecosystem.

Below are some of the graphical and spatial maps of selected samples that were analysed.

1.3.1 Quarterly trend analysis for the Upper Catchment stations

Analysed trend data from the Upper Catchment stations for temperature and ammonia nitrogen shown in figure 1.5 and figure 1.6 below confirmed that both parameters were within the Authority’s quality guideline and hence indicating a healthy aquatic ecosystem.

The water quality results obtained from both in-situ measurements and through the Authority’s environmental laboratory analyses indicated a healthy aquatic ecosystem of the waters in the lake, the Zambezi River and its tributaries as most parameters continued registering values within the requirements of the Authority’s Water Quality Guidelines for livestock watering, irrigation and aquatic life.

1.3.3 Temporal Distribution of Heavy Metals and Major Cations for Lake Kariba

The Authority also monitored heavy metals and some cations in order to confirm their concentration levels in Lake Kariba. Below are graphs showing results of iron and calcium concentration sampled from strategic points on the lake.

The Environmental Monitoring and Management team aboard a speed boat on a water testing and analysis mission on Lake Kariba.
Overview
The Authority continued to carry out its mandate regarding projects and dam management services throughout the year as follows:

a) The development of hydropower infrastructure on the Zambezi River with the objective of completing the preparatory (feasibility) studies and other preconstruction activities for the Batoka Gorge Hydro-Electric Scheme. The feasibility studies included the following:
- Environmental and Social Impact Assessment Studies.
- Updating of the Engineering Feasibility Studies.
- Assessment of the Legal and Financial Transaction issues.

b) The monitoring and maintenance of the Kariba Dam and its appurtenances, in line with the Standing Operating Procedures (SOP) for Kariba Dam and the implementation of key remedial actions continued during the year through activities meant for addressing the operation and maintenance (O&M) of Kariba Dam as recommended by the 2015 five-yearly inspection. The said activities were aimed at risk reduction and monitoring of measures to address potential failure modes (PFM) identified for the Kariba Dam. Some of these PFMs continued to be addressed through the Kariba Dam Rehabilitation Project (KDRP).

The implementation of the Kariba Dam Rehabilitation Project (KDRP) continued during the year. The spillway refurbishment works contract was awarded to a Consortium of GE Hydro France and Freyssinet International in May 2019 while the effective commencement date was 23 September 2019. The plunge pool contractor, Razel-Bec, continued with the implementation of the plunge pool reshaping works.

BATOKA GORGE HYDRO-ELECTRIC SCHEME
The Batoka Gorge Hydro-Electric Scheme (BGHES) is one of the schemes out of a cascade of potential hydro-electric schemes on the Zambezi River common to Zambia and Zimbabwe. An option analysis, which was part of the feasibility studies, recommended a site 47km downstream of the Victoria Falls as the most viable site out of several sites considered for developing the full generating head between the Victoria Falls and the Kariba Dam. The feasibility studies recommended a run-of-river scheme with limited peaking capacity for environmental needs and an installed capacity of 1200MW on each bank, with a total installed capacity of 2400MW.

The Authority continued to undertake activities for the development of the BGHES as follows:
- Preparatory studies
- Procurement of a developer
- Land acquisition for the project
- Mobilisation of project finances
- Development of job creation maximisation tools

Preparatory studies
There were three preparatory studies undertaken during the period under review, namely:
- Updating of the engineering feasibility studies (EFS) to assess and update the 1993 feasibility studies and develop a bankable feasibility study. The studies were completed in October 2019.
- Environmental and Social Impact Assessment (ESIA) studies to evaluate the design for the BGHES and to develop the required Environmental and Social Impact Assessments (ESIA), together with the Environmental and Social Management Plans (ESMPs), Resettlement Policy Frameworks (RPFs) and the Resettlement Action Plans (RAPs)/Livelihood Restoration Plans (LRPs), as required for each infrastructure investment associated with the project. The draft ESIA report and the associated ESMPs were completed in the fourth quarter of 2019.
- Legal and Financial Transaction Studies to identify legal and financial transaction issues to be considered and put in place for the development of the Batoka Gorge Hydro-Electric Scheme. The provision of the related services will continue to financial close.
- In addition to the above studies, the Authority commenced the procurement of a technical advisor to provide technical support to the Authority during the negotiations and construction phases.
Procurement of the works developer
The Council of Ministers (COM) adopted the Build, Operate and Transfer (BOT) model as the preferred model for the development of the BGHES after considering the two countries’ project commitments and residual capacity to raise sovereign guarantees required for the financing of the BGHES project. Furthermore, due to the critical power shortage in the contracting states of Zambia and Zimbabwe, compounded by the low water levels at the Kariba Dam, COM made an emergency decision to award the contract for the development of the BGHES to a Consortium of Power Construction Corporation of China Limited (Power China) and General Electric (GE) on a BOT mode at its extra-ordinary meeting held on 12th July, 2019. The Authority continued engaging the Developer for purposes of structuring and negotiating the agreements required for implementation of the project. Further, the developer continued to align the studies to the requirements of the prospective financiers of the project.

Land acquisition for the project
The Authority continued to engage key stakeholders in the Contracting States for the acquisition of land on which the dam, the two power houses, offices, employee townships and all other auxiliary infrastructure will be developed. This was being undertaken with the involvement of the power utility companies from Zambia and Zimbabwe. By December 2019, over 2700 hectares of land had been secured on the North Bank while over 3000 hectares was secured on the South Bank.

Financing of the project
Following the expiry of the Co-operation in International Waters in Africa (CIWA) grant on 31st December 2018, the Authority assumed the role of a sole financier of the preparatory studies and other project preparatory activities.

Job Creation Maximisation Activities
The Authority, with support from the African Union Development Agency (AUDA) - New Partnership for African Development (NEPAD), developed a tool kit to be used to develop strategies to maximise job creation for the BGHES. The tool kit will be used to estimate direct jobs, indirect jobs and induced jobs to be created by the project.

KARIBA DAM REHABILITATION PROJECT (KDRP)
The Kariba Dam Rehabilitation Works continued throughout the year and the progress status at the end of the year was as outlined below:

1. Plunge Pool Reshaping Works
   Mobilisation
   Supervisor’s Representative (Engineer)
   The Supervisor’s Representative, Stucky Limited continued to mobilise expert staff required for the supervision and management of the project. The year ended with four expatriate and four local staff on site.

   Contractor
   The contractor’s total workforce was 184 persons by year end; 119 being local while 65 were from outside Siavonga. A further 32 personnel were engaged and comprised the subcontractor’s (Hydrokarst) workforce.

   Whilst all the contractor’s equipment, including that for the construction of the Cofferdam was at site, additional equipment was expected to be mobilized to address the geo-technical challenges encountered in the cofferdam foundations. Equipment for the plunge pool excavation works was yet to be mobilized.

   Status of Works
   The status of works was as follows:
   a) Completed works:
      ✔ Establishment of the construction camp.
Construction of explosives magazines.
- Construction of the temporary access road above water level.
- Construction of the permanent access road over the ZESCO Limited tailrace platform.
- Construction of the lift platform which will be used in the construction of the cofferdam piers.
- Excavation of the cofferdam foundations for piers number 2 to 5, from the left bank (North Bank).
- Fabrication of the 41 stop-logs for the cofferdam and their transportation from South Africa.
- Construction of Pier 1 and the north-bank wing wall.

b) Works in progress
- Development of permanent sections of the access road from the plunge pool to the dump-site.
- Construction of the Cofferdam – Pier 2 to 5.
- Cofferdam foundation excavations – Pier 6 to 8.

c) Pending Activities
- Additional cofferdam foundation excavations (Pier 6 to 8).
- Construction of the cofferdam.
- De-watering of the plunge pool.
- Blasting excavation to re-shape the plunge pool.
- Mucking of the excavated rock.
- Repair of the fault-zone with reinforced, abrasion-resistant concrete.

Project Timelines
The cofferdam foundation challenges outlined above had significant impact on the previously planned project timelines, resulting in the shifting of the completion date from December 2021 to December 2022 as indicated in the diagram below.

2. Spillway Refurbishment (Emergency Gate, New Gantry and Associated Civil Works)
Progress on the implementation of the Spillway Refurbishment Works is as presented below:

2.1. Key Project Time-line Information
Commencement Date: 23rd Sept 2019
Contract Duration: 51 Months
Projected End Date: 23rd Dec 2023
Contractor: Consortium GE Hydro France & Freyssinet International

2.2 Contract Implementation Programme
Site establishment as well as procurement activities for mechanical equipment to be manufactured by specialist sub-contractors were underway within the contractor’s camp.
The key milestones achieved to date are as follows:

- Contractor’s program of implementation: 21-10-2019
- Site hand-over to contractor: 23-10-2019
- Quality management plan submitted: 23-10-2019
- Last instalment of advance payment: 15-11-2019

DAM SAFETY MONITORING

The Authority continued carrying out dam safety monitoring and surveillance activities aimed at ensuring the safety and reliability of the Kariba Dam. Dam safety monitoring activities which included data collection and analysis and interpretation of results of the various dam monitoring instruments were carried out throughout the year. Dam inspection and surveillance processes were also performed to identify any performance deficiencies that could threaten the structural integrity of the dam. These processes helped the Authority to ascertain the structural condition of the dam and where necessary prescribe measures to correct any identified performance deficiencies before they deteriorated into structural safety risks that would undermine the safety of the dam.

Bi-Annual Inspections

The Authority carried out Bi-annual inspections of the dam and appurtenances in compliance with the SOP manual. The inspections focused on on-condition monitoring and assessment of dam instruments, hydro-electromechanical equipment and state of the abutments. Progress made on the recommendations towards achieving the 2015 five-year inspection was also reviewed. In addition, the Authority also addressed the maintenance recommendations through the Kariba Dam Rehabilitation Project (KDRP) which seeks to rehabilitate the plunge pool and spillway as well as conducting various operational and maintenance (O&M) activities. The O&M activities focused on monitoring and maintenance of the South Bank slope and hydro-electromechanical equipment of the spillway as prescribed in the SOP manual.

Dam Instrumentation

The Kariba Dam is equipped with various instruments for data collection which is processed to monitor the response of the dam to various load combinations. The data was evaluated using statistical methods based on previous behavior as well as modelling using specialized software programs such as CONDOR®. Plots of time series gave deformation residuals that defined dam behavior. Amongst the monitoring instruments are pendulums, piezometers, strain-meters, extensometers, rock meters, joint meters, precision levelling of the dam crest and galleries as well as dedicated geodetic networks of the dam and South Bank slopes.

MONITORING RESULTS

Results of data analysis from the dam pendulums, mini-geodetic deformation survey of target T434, South Bank pendulum PS1-1(y) and CONDOR® software modelling are presented to demonstrate the behavior of the dam. The analysis of data from other instruments is performed in a similar manner.

Dam Pendulums

The analysis of data from dam pendulums showed a general deflection of the dam towards the upstream as shown in Figure 1. This behavior is attributable to the low reservoir water level that was experienced during the year. Due to the characteristic increase in concrete volume arising from the effects of Alkali Aggregate Reaction (AAR), stress releases in the upper sections of the dam cantilever results in deflection of the dam towards the upstream. This cyclic behavior is normal and reverses once the water levels and hydrostatic load starts to increase.
Figures 1. Dam pendulum deflections at the crest

Target T434 Measurements
Target T434 is located on the upstream of Pier 2 from where angles and distances are measured from control points located far away from the dam. Data collected from this station provided a means for establishing deformations around the station and also counterchecking results from other monitoring systems such as pendulums. As shown from the time series plot in Figure 2, the dam was deflecting towards the upstream during the period under review due to low water levels and effects of AAR.

Figure 2. Results of target T434
South Bank Monitoring

The stability of the South Bank is monitored through visual inspections, a series of pendulums as well as a dedicated geodetic network. Results of analysis of the south bank slope monitoring systems showed that although the shallow slope continued to slide towards the downstream and the river, the sliding rate has been marginally lower in the last five years. A plot of the rate of sliding measured at pendulum PS1-1(y) is shown in Figure 3. The analysis of the results showed no abnormal movement of the slope during the period under review.

![Figure 3. Sliding of the South Bank slope at pendulum PS1-1(Y)](image)

**CONDOR® Modelling**

CONDOR® is a tailor-made software for statistical analysis of structural behavior based on hydrostatic-seasonal-time (HST) modelling of systems. Using this technique, the assessment of individual effects of load combinations due to hydrostatic pressure, seasonal temperature variations and the non-reversible deformation due to ageing of the dam is made possible. This process enables segregation of individual factors contributing towards the global deformation as well as quantification of the resultant deformation residuals from each of the contributing factors. Analysis of the collected dam safety data using the CONDOR® software showed no abnormal behavior of the dam, abutments and the South Bank slope.

**Geodetic deformation measurements and analysis of results**

Kariba Dam is fitted with geodetic deformation survey networks that are used to monitor the behavior of the dam and the South Bank slope. Deformation residuals are calculated using the Helmert transformation method within a three-dimensional space. Results of this technique produces absolute distortion-free deformations that are referenced to control beacons located far away from the foundation of the dam. From the two measurements carried out in 2019, the results of analysis showed that the dam was behaving normally.

**Precision Levelling**

Two precision levelling measurements of the crest of the dam and galleries were performed in 2019. The results of the measurements are shown in Figure 4.
Figure 4 shows a plot of the crest deformation in August 2019. The results show that dam crest levels were predominantly higher when compared to previous measurements. This is attributable to the low reservoir levels under which the effects of concrete swelling due to AAR is more pronounced. The behavior confirms results obtained from other monitoring systems such as the dam pendulums and geodetic deformation surveys.

**Kariba Dam Maintenance 2019**

Over and above the major rehabilitation of the dam, maintenance of the dam and related structures continued in the year in line with the requirements of the SOP manual.

The work carried out included but not limited to the maintenance of hydromechanical equipment which included rope dressing, lubrication of bearings and all the moving parts and removal of calcite build up in order to allow free movement of the gates. Pre-rainfall season works were also carried out to prevent accumulation of water and ingress of water into the south bank rock mass. This work included repairing of the south bank slope protection sealing and removal of debris from surface drains.

Testing of the gates under load could not be undertaken as opening would require stoppage of the ongoing plunge pool rehabilitation works. In the event of the need to pass floods arising, testing of the gates would be undertaken before spillage as the dam is operated in such a way that there should be an adequate lead period to spilling.

**Dam Behaviour**

The Authority performed dam safety monitoring and maintenance management processes of data collection and analysis during the year in accordance with requirements of the SOP manual. The results of analysis of data collected from the monitoring instruments indicated that the dam continued to behave normally as expected.
Figure 4 shows a plot of the crest deformation in August 2019. The results show that dam crest levels were predominantly higher when compared to previous measurements. This is attributable to the low reservoir levels under which the effects of concrete swelling due to AAR is more pronounced. The Authority performed dam safety monitoring and maintenance management processes of data collection and analysis during the year in accordance with requirements of the SOP manual. The results of analysis of data collected from the monitoring instruments indicated that the dam continued to behave normally as expected.

ZAMBEZI VALLEY DEVELOPMENT FUND

The Authority continued to improve its corporate image through its corporate social responsibility by implementing several projects under the Zambezi Valley Development Fund (ZVDF). These projects were specifically targeted at communities that were displaced during the construction of the Kariba Dam. Out of the 34 projects which were approved for implementation during the strategic period 2015 to 2019, a total of 25 projects were completed in the last five years. Since inception of the ZVDF in 1997, the Authority has successfully implemented 45 developmental projects.

The following projects were at various stages of implementation at the end of December 2019.

**ZAMBIAN PROJECTS**

**Lusitu Water Reticulation System, Chirundu District**

The year under review closed with phase 2 of the implementation of the resuscitation of the Lusitu water scheme which involved installation of two surface pumps. These were procured and installed at the Lusitu water intake point and at the Pambazana booster pumping station. The installation of the two pumps greatly improved the water supply in the Lusitu area. It alleviated the need for the beneficiaries to walk long distances to fetch water from the crocodile infested Zambezi River.

The projects to construct a 1x3 classroom and a 1x2 laboratory block at Sinafala Secondary School were approved by the ZVDF Board of Trustees at its 33rd meeting held in Victoria Falls, Zimbabwe. The construction of the classroom block progressed well and had reached roof level before end of December 2019. The additional classroom block will improve the learning environment as it will decongest the existing limited facilities.
Kalomo District
The construction of a 1x3 classroom block and sinking of six additional boreholes in the Nkandazovu area of Kalomo District progressed very well. The classroom block had reached foundation level by December 2019 and its completion will enable the Nkandazovu School to upgrade from its current status of primary school to secondary school. The sinking of the boreholes was completed and handed over to the six beneficiary communities in November 2019.

Siavonga District
The project at Manchamvwa Primary School to construct a 1x2 classroom block had reached roof level while the other 1x2 classroom block was at foundation level. The school only has a 1x3 modern classroom block. Consequently, the construction of additional classroom blocks will de-congest and improve access to a conducive learning environment.

Sinazongwe District Installation of Solar System Project
The project to install solar systems at five health centres in Sinazongwe district was approved for Muziyo, Sulwegonde, Muuka, Siameja and Kamfwambila clinics. All the installed systems were commissioned and were operational.
Kalomo District

The construction of a 1x3 classroom block and sinking of six additional boreholes in the Nkandazovu area of Kalomo District progressed very well. The classroom block had reached foundation level by December 2019 and its completion will enable the Nkandazovu School to upgrade from its current status of primary school to secondary school. ANNUAL REPORT 2019

ZAMBEZI RIVER AUTHORITY

Kushinga Primary School Gokwe North District

The project to construct a 1x2 classroom block at Kushinga Primary School, in Simchembu chiefdom of Gokwe North district reached roof level. The improved infrastructure will provide access to quality education and reduce congestion in the small structures that are currently being used.

Figure 8: One of the structures currently being used as a classroom at Kushinga Primary School

Figure 9: A 1x2 classroom block under construction at Kushinga Primary School

Chikango Primary School Gokwe North District

The construction of three F14 model staff houses that commenced in 2018 was completed successfully in 2019. The houses were handed over to the school administration for use by teachers. The community actively participated in the project through provision of labour and mobilisation of local construction materials like sand and crushed stones.

Chisipite Primary School Hurungwe District

The works for the construction of a 1x2 classroom block at Chisipite Primary School, in Hurungwe District of Zimbabwe progressed well. The classroom was at slab level as at December 2019. The members of the local community continued to support the project through the provision of locally made bricks as part of their contribution.

MEDIA COVERAGE

The Authority, through the Public Relations and Communications Unit, worked closely with key media institutions which resulted in positive media coverage at national, regional and level. Online media institutions from within and outside the two Contracting States took the lead in providing wide publicity of the Authority’s activities on their websites and social media platforms. A total of 107 media institutions published Authority related stories at least once.

The year opened with a 9.4% coverage (as shown in figure 1) which peaked in July to 52% (as shown in figure 2) and closed off the year at 37% (figure 1).

The coverage was mainly due to activities on the Kariba Dam Rehabilitation Project, the Batoka Gorge Hydro Electric Scheme as well as updates on water levels at the Lake Kariba.

Figure 2 also showcases the five months when the Authority recorded the highest coverage in the year.
AUTHORITY OWNED MEDIA
Social Media - Apart from publicity through mass media, the Authority also continued to utilize its own media and Facebook to share updates with over 8000-page followers. The comments and discussions that followed every post showed that the public was keen to fully understand the Authority’s operations and developmental activities.

a). Website – The Authority website continued to serve as another key information dissemination channel. The contacts page carried a messaging platform where followers shared their views on matters of concern thus providing a two-way communication system.

b). Press Releases – The Authority released several press statements to the media and downstream stakeholders informing them of various undertakings by the Authority. Much of the recorded positive publicity arose from such initiatives.

c). KDRP Animation Video - To simplify the highly technical works at the KDRP, an animation video was produced and approved for dissemination in September 2019.

STAKEHOLDER ENGAGEMENT
Throughout the year under review, the Authority worked in liaison with the KDRP appointed communications consultant to increase stakeholder engagement through:

a). Presentation to the Zambia Chamber of Commerce and site visits to the Kariba Dam.

b). Shooting of a KDRP documentary during visits to local communities, traditional chiefs and members of local communities with a view to sensitizing them on the project.

c). Six radio programme were aired during the last quarter of 2019. The programmes covered environmental issues and grievance procedures following the development of a programme for an awareness campaign for grievance redress mechanism and gender-based violence.

d). Stakeholder engagements were conducted at village and local government levels in respect of the development of the Batoka Gorge Hydro-Electric Scheme during the environmental and social impact assessment programmes.

CAPACITY BUILDING
Crisis management workshops were conducted for front office personnel in Lusaka and Kariba offices in July 2019.
1. **Employee / Employer Relations**
   The Authority continued to experience harmonious employee-employer relations across its entire network during the period under review.

2. **Employee Establishment**
   The employee complement as at 31st December 2019 was 147 against the approved establishment of 188 which include the recently approved additional 21 positions under the Projects and Dam Management Services Department, three positions under the ICT Section and one position under the Legal Services Section.

The Authority reports with sadness the death of a dedicated and committed employee, Mr. Charles Lovemore Bingura, who died after 45 years of unbroken service to the Authority. May his soul rest in eternal peace.

5. Employee Placements and Promotions

There were no employee placements and promotions recorded during the period under review.

6. Training and Development / Capacity Building

Every year, the Authority empowers employees with knowledge and skills vital for effective execution of the corporate strategic objectives through training and development programmes. Consequently, during the year 2019, employees attended various professional workshops and seminars which included Contract Management and Administrative Disciplines Modules 3 and 4 under FIDIC Contracts and Financial Fitness. The Authority spent a total amount of US$ 163,920.65 on training and development programmes.

Further, employees attended strategic planning workshops on the formulation of the corporate strategy to run for a five year period from 2020 to 2024.
7. Performance Management System
The performance management system action plan for the year 2019 was implemented on schedule. However, the performance management system processes were not executed on schedule due to the re-organisation exercise necessitated by the retrenchment and re-engagement of employees.

8. Retrenchment of employees on permanent and pensionable employment service and termination of employment contracts for executive management employees and their re-engagement on revised terms and conditions of service

The Council of Ministers, at its 36th meeting held on 15th June 2018, in its quest to ensure the Authority’s long-term sustainability by containing employment costs, approved the retrenchment exercise for employees on permanent and pensionable employment service and termination of employment contracts for executive management employees and the re-engagement of all employees on revised terms and conditions of service.

The retrenchment exercise involved 134 employees whose employment service was terminated effective 30th April 2019. The said employees were re-engaged on 1st May 2019.

Only four out of the 134 employees opted to separate from the Authority following their offer of employment on revised terms and conditions of service effective 1st May 2019. All the four employees were based in Zambia.

Consequently, the rest of the employees, who were re-engaged, commenced work on 1st May 2019. The cost for the retrenchment exercise was US$12.8 million and the Authority was expected to save US$4.7 million annually after the re-engagement of employees on revised terms and conditions of service. The savings would arise from the reduction of the pay structure by 15%, reduction of some employment allowances and the abolishment of some employment allowances.

The Authority was yet to realize the anticipated savings since the revised terms and conditions of service applied to only 55 employees, based in Zimbabwe, who were paid the retrenchment packages in September 2019. The Authority also implemented revised terms and conditions of service for four executive management employees whose employment contracts came to an end and were subsequently renewed.

The employees based in Zambia were not paid the retrenchment packages except for two employees who opted to separate from the Authority. The said employees continued to serve under the previous terms and conditions of service.
9. **Employee Welfare and Wellness Programmes**

The Authority recognises that healthy workers build a healthy organization and a healthy organization produces excellent business performance results. Therefore, the Authority continued to improve the welfare and wellbeing of employees through human resource strategies aimed at achieving the following:

- Improved employee satisfaction;
- Improved employee productivity;
- Mitigating occupational health and safety risks;
- Reducing costs associated with absenteeism;
- Improving employees’ organisational culture; and
- Improved organisational image through execution of corporate social responsibility obligations.

**In that regard, the Authority undertook the following initiatives:**

**a) HIV/AIDS** - The Authority supported employees by facilitating training programmes, providing counselling services and medical support. Employees who had disclosed their HIV/AIDS status continued to receive food packs and nutritional supplements on a monthly basis.

**b) Health and Safety** - In keeping with the Authority’s core values, the safety of employees and other stakeholders is cardinal to the operations of the Authority. In that regard, the Occupational Health and Safety Committee and representatives continued spearheading the management of health and safety issues in the Authority.

**c) Long Service Awards** - As a long-standing tradition, each year, the Authority recognises long serving employees through awards for 10, 15, 20, 25, 30, 35 and 40 years’ service.

As at 30th April 2019, 30 employees received awards in their respective categories with one employee attaining 40 years service.

The categories for the recipients of the long service awards are as indicated in the chart below:

![2019 Long Service Awards by Category (Years)](chart)

**d) Social Sports**

The Authority values the health and vitality of its employees. This is exemplified by one of the Authority’s core values of health and safety. During the period under review, the Authority facilitated the employees’ participation in social football, golf, gym, swimming and athletics as follows:
i) Social Football
The social soccer club committee organised local social games with other social clubs in Kariba and Siavonga.

ii) Golf
Employees at Head Office participated in golf tournaments held locally in Lusaka.

iii) Provision of Gym facilities
Employees at both the Head Office and Kariba station utilised Authority facilities for their stay-fit programmes. This continued during the period under review with the gym equipment being in fair state. However, since the gym premises in Kariba have limited space, plans to expand the same were underway.

iv) Athletics

v) May Day Activities
Authority employees joined their colleagues from other organisations in both Zambia and Zimbabwe in commemorating the Labour Day/Workers Day which falls on 1st May each year. The Zimbabwean nationals celebrated Workers Day in Kariba while their Zambian counterparts celebrated Labour Day in Siavonga.

For the first time, the Authority presented Excellence Awards and prizes to 24 employees during the Labour Day celebrations in Siavonga, as follows:

Employees who participated in the labour day celebrations in Siavonga, Zamba

Excellence Awards
• 10 employees received the Unsung Hero Award;
• Six employees received the Light Bulb Award; and
• Eight employees received the Bureaucracy Buster Award.

Naming of the Enterprise Resource Planning (ERP) Project
Three employees who participated in the naming competition for the Enterprise Resource Planning (ERP) project were awarded prizes for being the first, second and third winners.
Kariba Office Administration Building
Front view
The functions of the Authority are set out in the schedule to the Zambezi River Authority Acts of 1987 as follows:

(i) From time to time and subject to the approval of the Council, make such revision of salaries, wages, and other remuneration to its employees as it considers appropriate;

(ii) all telemetering stations relating to the Kariba Dam;

(iii) any other installations owned by the Authority;

(k) Give effect to such directions, as may from time to time, be given by the Council;

(l) Carry out such other functions as are provided for in the Agreement or are incidental or necessary for the performance of its functions under the Agreement;

(b) In consultation with the National Electricity Undertakings, investigate the desirability of constructing new dams on the Zambezi River and make recommendations thereon to the Council of Ministers ("the Council");

(f) Make such recommendations to the Council as will ensure the effective and efficient use of water and other resources of the Zambezi in the interests of the Contracting States;

(e) In consultation with the National Electricity undertakings, regulate the water level in the Kariba Dam and reservoir and in any other reservoir owned by the Authority;

(c) Subject to the approval of the Council, construct, operate, monitor, and maintain any other dams on the Zambezi River, which flows between the two countries' common border. ZRA is also mandated to maintain the Kariba Dam Complex (Kariba Complex) and to construct and maintain other dams or installations for the better performance of its functions and for any other purpose beneficial to the Contracting States;

(d) Collect, accumulate and process hydrological and environmental data of the Zambezi River and its tributaries in order to facilitate the better performance of its functions.

The Zambezi River Authority ("the Authority") was established as a corporate body on 1 October 1987 as a result of the Agreement between the Republic of Zambia and the Republic of Zimbabwe. The said Agreement, to which both countries adhered to, is also known as the "Zambezi River Authorities Agreement".

ZRA was established with an initial capital of USD 500,000.00, which was later increased to USD 7 million. It is mandated with the management of the Zambezi River basin, the Kariba Dam Complex and other installations owned by ZRA for the better performance of its functions and for any other purpose beneficial to the Contracting States.

ZRA is a non-profit making institution established under the laws of the Republic of Zambia. Its financial management is done in accordance with the laws of both governments, with the Republic of Zambia as the legal and administrative authority.
Zambezi River Authority
Director's report
For the year ended 31 December 2019

Directors Report

The Directors submit their report together with the audited annual financial statements for the year ended 31 December 2019, which disclose the state of affairs and financial performance of Zambezi River Authority (“the Authority”).

Establishment and Functions

The Zambezi River Authority (“the Authority”) was established as a corporate body on 1 October 1987 by parallel legislation in the Parliaments of Zambia and Zimbabwe under the Zambezi River Authority Acts No.17 and 19 respectively. It was tasked with the management of the Zambezi River, which flows between the two countries’ common border. ZRA is also mandated to maintain the Kariba Dam Complex (Kariba Complex) and to construct and maintain other dams or infrastructure on the river forming the border between the two countries.

Principal Functions

The functions of the Authority are set out in the schedule to the Zambezi River Authority Acts of 1987 as follows:

(a) Operate monitor and maintain the Kariba Complex. Kariba complex means:

   (i) the Kariba Dam and reservoir
   (ii) all telemetering stations relating to the Kariba Dam
   (iii) any other installations owned by the Authority

(b) In consultation with the National Electricity Undertakings, investigate the desirability of constructing new dams on the Zambezi River and make recommendations thereon to the Council of Ministers (“the Council”);

(c) Subject to the approval of the Council, construct, operate, monitor, and maintain any other dams on the Zambezi River;

(d) Collect, accumulate and process hydrological and environmental data of the Zambezi River for the better performance of its functions and for any other purpose beneficial to the Contracting States;

(e) In consultation with the National Electricity undertakings, regulate the water level in the Kariba reservoir and in any other reservoir owned by the Authority;

(f) Make such recommendations to the Council as will ensure the effective and efficient use of the waters and other resources of the Zambezi;

(g) Liaise with the National Electricity Undertakings in the performance of its functions that may affect the generation and transmission of electricity to the Contracting States;

(h) Subject to provisions of Article 13, recruit employ and provide for the training of staff as may be necessary for the performance of its functions under the Agreement;

(i) From time to time and subject to the approval of the Council, make such revision of salaries, wages, and other remuneration to its employees as it considers appropriate

(j) Submit development plans and programmes to the Council approval;

(k) Give effect to such directions, as may from time to time, be given by the Council; and

(l) Carry out such other functions as are provided for in the Agreement or are incidental or conducive to the better performance of its functions.
Directors Report (continued)

Place of Business

(a) Head Office: House, 32 Cha Cha Cha Road, P.O. Box 30233, Lusaka, Zambia
(b) Harare Office: Club Chambers, Nelson Mandela Avenue, P.O. Box 630, Harare, Zimbabwe
(c) Kariba Office: Administration Block, 21 Lake Drive, (Pvt) Bag 2001, Kariba, Zimbabwe

The deficit for the year has been deducted from the revenue reserve.

Property, plant, and equipment

The Authority purchased property, plant and equipment amounting to US$ 18.88 million or ZMW 246.07 million or ZWL 187.56 million (2018 US$ 4.72 million; ZMW 56.95 million) during the year. In the opinion of the Directors, the carrying value of property, plant and equipment is not more than their recoverable value.

Average number of employees

The total remuneration of employees during the year amounted to US$ 20.50 million or ZMW 277.19 million or ZWL 203.71 million (2018: US$ 10.35 million; ZMW 56.95 million) during the year. Included in this amount is US$ 11.56 million or ZMW150.70 million or ZWL 114.87 million in respect of retrenchment packages. The average number of employees was as follows:

The Authority has policies and procedures to safeguard the occupational health, safety, and welfare of its employees.

Related party transactions

The Authority has a common enterprise relationship with Governments of the Republic of Zambia and Zimbabwe. Other related party relationships and material balances that the Authority has with its related parties are listed in Note 24 to the financial statements.

Gifts and donations

The Authority made the following donations to charitable organisations and events during the year.

This document is a part of the ANNUAL REPORT 2019 of the Zambezi River Authority.
Breach of loan terms of agreement

The Authority has a 30 year subsidiary loan agreement dated 20 August 2015 with the Government of the Republic of Zambia for a loan amount of US$ 144 million to finance the Kariba Dam Rehabilitation Project. According to schedule 1 of this subsidiary loan agreement, the Authority is required to make repayments biannually on 1 March and 1 September. The Authority has in the current financial year defaulted on loan repayments totalling US$ 8,920,000 having paid only US$ 2,000,000. The amount in default is made up of current year repayments of US$ 5,947,000 (principal of US$ 3,800,000 and interest of US$ 2,147,000) and 2018 principal arrears of US$ 2,973,000. On 1 March 2020 US$ 2,945,000 will fall due (principal of US$ 1,900,000 and interest of US$ 1,0450,000), bringing the total amount outstanding to US$ 11,865,000. This is in contravention of section 3.04(ii) of Article III of the subsidiary loan agreement which states that repayments should not be delayed by more than 30 days from due date and failure of which the Government of Zambia has the right to cancel the loan agreement in accordance with Section 5.03 of Article V of the subsidiary loan agreement. The Authority has engaged both the Zambian and Zimbabwean Governments highlighting the challenges in settlement of the said obligation due to delayed payments from ZESCO Limited and failure to access the United States Dollars in Zimbabwe. The Council of Ministers has elected to resolve the Authority's liquidity challenges to enable it to settle its obligation to the Zambian Government.

Introduction of the Zimbabwe Dollar (“ZWL”)

On 22 February 2019, the Government of the Republic of Zimbabwe issued Statutory Instrument No. 33 of 2019 (SI33) which introduced an electronic currency, the Real Time Gross Settlement Dollar (“RTGS Dollar”). The SI was introduced for accounting and other purposes that all assets and liabilities that were valued in US$ immediately before 22 of February 2019 to be valued in RTGS Dollars at a rate of 1:1. The RTGS dollar was thereafter tradable on the foreign exchange market with future exchange rates being determined by the inter-bank market.

On 24 June 2019, the Government of the Republic of Zimbabwe through the enactment of Statutory Instrument Number 142 of 2019 introduced and designated the Zimbabwe Dollar (“ZWL”) as the sole currency for legal tender purposes in Zimbabwe and that reference to the Zimbabwe Dollar shall be consistent with the use of Bond notes and the electronic money also known as the RTGS Dollar. Accordingly, all funds held by the Authority in Zimbabwean banks with the exception of the Ring-Fenced Funds reported as Restricted cash, are denominated in Zimbabwe Dollar. The Government of the Republic of Zimbabwe has reiterated its commitment to release United States Dollar equivalent of the Ring-Fenced Funds as evidenced by the release of US$ 3 million in 2019.

The Authority has elected to present its 2019 financial results in three currencies namely; the Zimbabwe Dollar, the Zambian Kwacha and the United States Dollar. The United States Dollar has been retained because it is the pivot currency through which the Authority’s in country operations in both Contracting States have been translated into the local currency of the other. This practice is consistent with the provisions of International Accounting Standard 21 (“IAS 21”) “The Effects of Changes in Foreign Exchange Rates”, which requires a reporting entity to determine its functional currency and translate the foreign operation’s results into that currency but, still permits presentation in any currency or currencies. Furthermore, the adopted approach enables the Authority to meet the interests of the Cooperating Partners who are financing of the critical projects within the Authority.

Retrenchment

On 15 June 2018, the Council of Ministers (“The Council”) approved the Authority’s retrenchment plan which included termination of contracts of employment and re-engagement of permanent, pensionable and contract employees. The retrenchment is an effort to ensure the Authority’s long-term sustainability by containing its cost of employment. Subsequently on 28 January 2019, the Authority issued notice of termination of employment to all its employees effective 1 February 2019 to 30 April 2019. The Authority has since effected the Revised Terms and Conditions of Service for its Zimbabwe based employees following the effecting of payment of retrenchment packages totalling US$ 4.51 million paid in local currency equivalent.
Directors Report (continued)

Retrenchment (continued)

The exercise is yet to be fully implemented on the Zambian side due to lack of funds. Consequently, employees on the Zambian side continue to serve under the current Terms and Conditions of Service pending the payment of retrenchment packages. This is in keeping with the Zambian Constitution which requires that retrenchees and retirees be maintained on the employer’s payroll until the attendant termination packages are paid. It is expected that once fully implemented the Authority shall make annual savings of US$ 4.2 million.

Risk management and control

The Board, through the Audit, Corporate Governance and Risk Management Committee exercises oversight over Enterprise Risk Management (ERM) processes in the Authority. The Authority adopted ISO31000:2009 as its framework for ERM. Using this framework, the Authority systematically identifies, analyses and responds to risks, including the mapping of inter-relationships between risks. The Board accomplishes its oversight role through:

(i) Developing policies and procedures on risk management;
(ii) Following up executive management’s implementation of policies and procedures on risk management,
(iii) Following up on assurance that risk management policies and procedures are working as intended; and
(iv) Taking steps to foster a risk aware culture.

The Authority manages risk under five (5) categories namely: Operational, Financial, Project Management, Strategic and Reputational risk. The significant risks dealt with by the Authority across the five (5) categories in the period under review included Credit, Liquidity, Dam safety, Hydrological, Protracted stakeholder approval and Funding withdrawal risks. In the period under review the Audit, Corporate Governance and Risk Management Committee convened four (4) meetings as scheduled.

(a) Operational risk

Operational risk is in this instance the risk of dam failure due to operational deficiencies. The following are the significant risks noted under this category:

(i) Dam Safety risk – This is the risk of compromise to the safety of Kariba Dam complex. To manage this risk the Authority has adopted international standards for dam maintenance and safety monitoring. Furthermore, the Authority is currently undertaking the Kariba Dam Rehabilitation Project aimed at securing the long-term safety and reliable operation of Kariba Dam Complex

(ii) Hydrological Risk – This is a risk to the sustainable operation of the reservoir. The Authority continues to operate the reservoir in line with international best practice. Dialogue with the Power Utilities on the water usage is another migratory factor being employed by the Authority to manage the Hydrological risk.

(b) Financial risk

This is the risk that the Authority will experience financial loss due to change in market conditions. The following are the significant risks noted under this classification:

(i) Credit Risk – This is the risk that the Authority may be unable to collect what it is owed. This ranges from sales receipts to deposits and investments placed with financial institutions. The Authority has suffered loss from impairment of its long-term investments with the Commercial Bank of Zimbabwe following the conversion of investments from United States Dollars to the Zimbabwean Dollar.
Directors Report (continued)

Risk management and control (continued)

Financial risk (continued)

(i) Credit Risk (Continued)

Furthermore, the deterioration of the receivable collection days on its balances outstanding from the Utilities has raised credit risk to the fore of the risks requiring urgent attention. This has had a knock on effect on liquidity risk that has materialised itself in the Authority’s failure to meet its obligations including loans.

(ii) Liquidity Risk - This is the risk that the Authority may fail to settle its obligations as and when they fall due. Liquidity risk is strongly correlated with credit risk and the consequence of it materialising can give rise to an exposure to reputational risk. The Authority continues to explore ways of tightening its credit control mechanisms, including lobbying the principal shareholders for preferred consideration by trade creditors, so as to ensure sufficient liquidity for its operations.

The Authority’s financial risk exposures are discussed on pages 42 to 49 in Note 21 to the financial statements.

(c) Project Management Risk

This is the risk that a project may not be properly implemented or delayed. The Authority considered the risk of protracted stakeholder approval during the period under review. The risk emanates from the need to secure prior approval from financiers before proceeding to the next stage of any project related procurement. The Authority continues to interact with project financiers for quick turnaround time on all prior approvals. Any delay is obtaining prior approval affects subsequent processes relating to the project.

(d) Strategic Risk

This is the risk that the strategy may not be properly implemented. To manage this risk, the Authority has adopted a rational approach to Strategy formulation and performs a periodic evaluation of strategy implementation.

(e) Reputational Risk

This is the risk that adverse publicity will negatively impact the Authority’s operations. To manage this risk, the Authority has a policy framework in place to manage all communication on its operations with existing and potential stakeholders.

Governance Structure

The Council of Ministers and Directors who held office during the year and to the date of this report were as below:

Auditor

PricewaterhouseCoopers, were appointed to fill a casual vacancy in accordance with the Zambezi River Authority Acts No. 17 and 19 for the audit of the annual financial statements for the financial periods from 2017 to 2019. The auditor, PricewaterhouseCoopers, has indicated its willingness to continue in office and a resolution for its reappointment will be proposed at the next Council of Ministers Meeting.

On behalf of the Board:

Board Secretary

Date

01/04/2020
Zambezi River Authority
Statement of Directors’ responsibilities
For the year ended 31 December 2019

The Zambezi River Authority Acts No. 17 and 19 require the Directors to prepare annual financial statements for each financial year that give a true and fair view of the state of affairs of the Authority as at the end of the financial year and of its financial performance. It also requires the Directors to ensure that the Authority keeps proper accounting records that disclose, with reasonable accuracy, the financial position of the Authority. The Directors are also responsible for safeguarding the assets of the Authority.

The Directors accept responsibility for the annual financial statements, which have been prepared using appropriate accounting policies supported by reasonable estimates, in conformity with International Financial Reporting Standards and with the requirements of the Zambezi River Authority Acts No. 17 and 19. The Directors are of the opinion that the annual financial statements give a true and fair view of the state of the financial affairs of the Authority and of its financial performance in accordance with International Financial Reporting Standards. The Directors are also responsible for such internal control, as the Directors determine necessary to enable the preparation of annual financial statements that are free from material misstatements, whether due to fraud or error.

Nothing has come to the attention of the Directors to indicate that the Authority will not remain a going concern for at least twelve months from the date of these annual financial statements.
Independent auditor's report

To the Shareholders of Zambezi River Authority

Report on the audit of the annual financial statements

Our opinion

In our opinion, the annual financial statements give a true and fair view of the financial position of Zambezi River Authority as at 31 December 2019, and of its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards (IFRS) as issued by the International Accounting Standards Board (IASB) and the requirements of the Zambezi River Authority Act.

What we have audited

The annual financial statements of Zambezi River Authority are set out on pages 11 to 53 and comprise:

- the statement of financial position as at 31 December 2019;
- the statement of income and expenditure and other comprehensive income for the year then ended;
- the statement of changes in reserve for the year then ended;
- the statement of cash flows for the year then ended; and
- the notes to the annual financial statements, which include a summary of significant accounting policies.

Basis for opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the “Auditor’s responsibilities for the audit of the annual financial statements” section of our report.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Independence

We are independent of the Authority in accordance with the International Ethics Standards Board for Accountants’ (IESBA) International Code of Ethics for Professional Accountants (including International Independence Standards) (the “IESBA Code”). We have fulfilled our other ethical responsibilities in accordance with the IESBA Code.

Key audit matters

We have determined that there are no Key Audit Matters to communicate in our report.
Report on the audit of the annual financial statements (continued)

Other information

The Directors are responsible for the other information. The other information comprises the Authority’s Annual Report but does not include the annual financial statements and our auditor’s report thereon.

Our opinion on the annual financial statements does not cover the other information and we do not express any form of assurance conclusion thereon.

In connection with our audit of the annual financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the annual financial statements or our knowledge obtained in the audit, or otherwise appears to be materially misstated.

If, based on the work we have performed, we conclude that there is a material misstatement of this other information, we are required to report that fact. We have nothing to report in this regard.

Responsibilities of the Directors for the annual financial statements

The Directors are responsible for the preparation of the annual financial statements that give a true and fair view in accordance with IFRS as issued by the IASB and the requirements of the Zambezi River Authority Act and for such internal control as the Directors determine is necessary to enable the preparation of annual financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the annual financial statements, the Directors are responsible for assessing the Authority’s ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless the Directors either intend to liquidate the Authority or to cease operations, or have no realistic alternative but to do so.

The Directors are responsible for overseeing the Authority’s financial reporting process.

Auditor’s responsibilities for the audit of the annual financial statements

Our objectives are to obtain reasonable assurance about whether the annual financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor’s report that includes our opinion. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these annual financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgement and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the annual financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
Report on the audit of the annual financial statements (continued)

Auditor’s responsibilities for the audit of the annual financial statements (continued)

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Authority’s internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by the Directors.
- Conclude on the appropriateness of the Directors’ use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Authority’s ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditor’s report to the related disclosures in the annual financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor’s report. However, future events or conditions may cause the Authority to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the annual financial statements, including the disclosures, and whether the annual financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

We communicate with the Directors regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

From the matters communicated with the Directors, we determine those matters that were of most significance in the audit of the annual financial statements of the current period and are therefore the key audit matters. We describe these matters in our auditor’s report unless law or regulation precludes public disclosure about the matter or when, in extremely rare circumstances, we determine that a matter should not be communicated in our report because the adverse consequences of doing so would reasonably be expected to outweigh the public interest benefits of such communication.

Report on other legal and regulatory requirements

The Zambezi River Authority Act requires that in carrying out our audit we consider whether the Authority has kept proper accounting records and other records and other registers required by this Act.

In respect of the foregoing requirements, we have no matter to report.

The notes on pages 16 to 53 are an integral part of these financial statements.
Notes to the annual financial statements

1 General information

The Zambezi River Authority ("the Authority") is mandated to manage the Zambezi River, which flows between Zambia and Zimbabwe, the two contracting states' common borders. The Authority is also charged with the responsibility to maintain the Kariba Dam Complex (Kariba Complex) and construct and maintain other dams or infrastructure on the river forming the border between the two states. Its registered Head Office is:
Kariba House
32 Cha Cha Cha Road
P O Box 30233
Lusaka, Zambia.

2 Summary of significant accounting policies

The principal accounting policies applied in the preparation of these financial statements are set out below. These policies have been consistently applied to all years presented, unless otherwise stated.

(a) Basis of preparation

The annual financial statements of Zambezi River Authority have been prepared in accordance with International Financial Reporting Standards (IFRS) and interpretations issued by the IFRS Interpretations Committee (IFRS IC) applicable to entities reporting under IFRS and the requirements of the Zambezi River Authority Act. The financial statements comply with IFRS as issued by the International Accounting Standards Board (IASB).

The measurement basis applied is the historical cost basis, as modified by the revaluation of buildings and financial assets at fair value through profit or loss. The annual financial statements are presented in United States Dollars (US$), Zambia Kwacha ("ZMW" or "K") and in Zimbabwean Dollars ("ZWL'") rounded to the nearest dollar or kwacha.

In accordance with the Zambezi River Authority Acts No. 17 and 19, the annual financial statements for the period ended 31 December 2019 have been approved for issue by the Directors.

The preparation of annual financial statements in conformity with IFRS requires the use of certain critical accounting estimates. It also requires the Directors to exercise judgement in the process of applying the Authority’s accounting policies. The areas involving a higher degree of judgement or complexity, or where assumptions and estimates are significant to the annual financial statements, are disclosed in Note 3.

(b) Changes in accounting policy and disclosures

(i) New and amended standards adopted by the Authority

The Authority has adopted all the new, revised or amended accounting pronouncements as issued by the International and Accounting Standards Board (IASB), which were effective for the Authority from 1 January 2019.

The amendments listed below did not have any material impact on the amounts recognised in prior periods and are not expected to significantly affect the current or future period:

(i) IFRS 16 Leases
(ii) Prepayment Features with Negative Compensation Amendments to IFRS 9
(iii) Interpretation 23 Uncertainty over income Tax Treatments
(iv) Annual Improvements to IFRS Standards 2015-2017 Cycle
Notes to the annual financial statements

2 Summary of significant financial policies (continued)

(b) Changes in accounting policy and disclosures (continued)
(i) New and amended standards adopted by the Authority

IFRS 16 Leases

IFRS 16 Leases, replaces the current guidance in IAS 17 and is a far-reaching change in accounting by lessees in particular.

Under IAS 17, lessees were required to make a distinction between a finance lease (on balance sheet) and an operating lease (off balance sheet). IFRS 16 now requires lessees to recognise a lease liability reflecting future lease payments and a ‘right-of-use asset’ for virtually all lease contracts. The IASB has included an optional exemption for certain short-term leases and leases of low-value assets; however, this exemption can only be applied by lessees.

For lessors, the accounting stays almost the same. However, as the IASB has updated the guidance on the definition of a lease (as well as the guidance on the combination and separation of contracts), lessors will also be affected by the new standard.

At the very least, the new accounting model for lessees is expected to impact negotiations between lessors and lessees. Under IFRS 16, a contract is, or contains, a lease if the contract conveys the right to control the use of an identified asset for a period of time in exchange for consideration.

IFRS 16 has no material impact on the Authority’s accounting practices in the current period, as there are no leased assets except for office space rented for Harare office operations.

Prepayment Features with Negative Compensation Amendments to IFRS 9 Financial Instruments

The narrow-scope amendment covers two issues:

- The amendments allow companies to measure particular pre-payable financial assets with so-called negative compensation at amortised cost or at fair value through other comprehensive income if a specified condition is met—instead of at fair value through profit or loss. It is likely to have the biggest impact on banks and other financial services entities.

How to account for the modification of a financial liability. The amendment confirms that most such modifications will result in immediate recognition of a gain or loss. This is a change from common practice under IAS 39 today and will affect all kinds of entities that have renegotiated borrowings.

Interpretation 23 Uncertainty over income Tax Treatments

IFRIC 23 provides a framework to consider, recognise and measure the accounting impact of tax uncertainties. The Interpretation provides specific guidance in several areas where previously IAS 12 was silent. The Interpretation also explains when to reconsider the accounting for a tax uncertainty. Most entities will have developed a model to account for tax uncertainties in the absence of specific guidance in IAS 12. These models might, in some circumstances, be inconsistent with IFRIC 23 and the impact on tax accounting could be material. The interpretation will not have an impact on the Authority’s accounting practices in the year under review because it is exempt from payment of taxes on its income, profits and capital gains.
Notes to the annual financial statements

Summary of significant accounting policies (continued)

(b) Changes in accounting policy and disclosures (continued)

(i) New and amended standards adopted by the Authority

Annual Improvements to IFRS Standards 2015-2017 Cycle

These amendments include minor changes to:

- IFRS 3, ‘Business combination’ - a company remeasures its previously held interest in a joint operation when it obtains control of the business.
- IFRS 11, ‘Joint arrangements’ - a company does not remeasure its previously held interest in a joint operation when it obtains joint control of the business.
- IAS 12, ‘Income taxes’ - The amendment clarified that the income tax consequences of dividends on financial instruments classified as equity should be recognised according to where the past transactions or events that generated distributable profits were recognised.

IAS 23, ‘Borrowing costs’ - a company treats as part of general borrowings any borrowing originally made to develop an asset when the asset is ready for its intended use or sale.

IAS 23 is the most relevant to the Authority’s reporting as there is a significant component of loan financing in the Kariba Dam Rehabilitation project. The impact of the improvement will however only take effect once the project works have been completed which is likely to be between 2023 and 2025.

(ii) New and amended standards not early adopted by the Authority

Certain new accounting standards and interpretations have been published that are not mandatory for 31 December 2019 reporting periods and have not been early adopted by the Authority. These standards are not expected to have a material impact on the entity in the current or future reporting periods and on foreseeable future transactions.

IFRS 17 Insurance Contracts: IFRS 17 was issued in May 2017 as replacement for IFRS 4 Insurance Contracts. It requires a current measurement model where estimates are re-measured in each reporting period.

Definition of a Business – Amendments to IFRS 3: The amended definition of a business requires an acquisition to include an input and a substantive process that together significantly contribute to the ability to create outputs. The definition of the term ‘outputs’ is amended to focus on goods and services provided to customers, generating investment income and other income, and it excludes returns in the form of lower costs and other economic benefits. The amendments will likely result in more acquisitions being accounted for as asset acquisitions.

The amendments are effective for financial periods beginning 1 January 2020. The Company does not expect the new amendments to have a material impact on its annual financial statements.

Revised Conceptual Framework for Financial Reporting: The IASB has issued a revised Conceptual Framework which will be used in standard-setting decisions with immediate effect. Key changes include:

(i) increasing the prominence of stewardship in the objective of financial reporting
(ii) reinstating prudence as a component of neutrality
(iii) defining a reporting entity, which may be a legal entity, or a portion of an entity
(iv) revising the definitions of an asset and a liability
(v) removing the probability threshold for recognition and adding guidance on derecognition
(vi) adding guidance on different measurement basis, and
Notes to the annual financial statements

2 Summary of significant accounting policies (continued)

(b) Changes in accounting policy and disclosures (continued)

(ii) New standards and interpretations not yet adopted (continued)

Revised Conceptual Framework for Financial Reporting (continued)

(vii) stating that profit or loss is the primary performance indicator and that, in principle, income and expenses in other comprehensive income should be recycled where this enhances the relevance or faithful representation of the financial statements.

No changes will be made to any of the current accounting standards. However, entities that rely on the Framework in determining their accounting policies for transactions, events or conditions that are not otherwise dealt with under the accounting standards will need to apply the revised Framework from 1 January 2020. These entities will need to consider whether their accounting policies are still appropriate under the revised Framework.

The new framework is effective for financial periods beginning 1 January 2020. The Company does not expect the new framework to have a material impact on its annual financial statements.

Sale or contribution of assets between an investor and its associate or joint venture – Amendments to IFRS 10 and IAS 28:

The IASB has made limited scope amendments to IFRS 10 financial statements and IAS 28 Investments in associates and joint ventures. The amendments clarify the accounting treatment for sales or contribution of assets between an investor and its associates or joint ventures. They confirm that the accounting treatment depends on whether the nonmonetary assets sold or contributed to an associate or joint venture constitute a ‘business’ (as defined in IFRS 3 Business Combinations). Where the non-monetary assets constitute a business, the investor will recognise the full gain or loss on the sale or contribution of assets. If the assets do not meet the definition of a business, the gain or loss is recognised by the investor only to the extent of the other investor’s interests in the associate or joint venture. The amendments apply prospectively. In December 2015 the IASB decided to defer the application date of this amendment until such time as the IASB has finalised its research project on the equity method.

The amendments apply prospectively. In December 2015 the IASB decided to defer the application date of this amendment until such time as the IASB has finalised its research project on the equity method.

The above standards are expected not to have a material impact on the Authority.

There are no other IFRSs or IFRIC interpretations that are not yet effective that would be expected to have a material impact on the Authority.

(c) Foreign currency translation

(i) Functional and presentation currency

The Authority as a bi national institution has operations in both Zambia and Zimbabwe and, prior to the introduction of the RTGS Dollar on 22 February 2019, the Authority’s presentation currencies were the Zambian Kwacha (“ZMW”) and the United States Dollar (“US$”). However, following the adoption of the Zimbabwe Dollar (“ZWL”) as sole legal tender for Zimbabwe on 24th June 2019, the Authority’s presentation currencies are the Zambian Kwacha (“ZMW”), the Zimbabwe Dollar (“ZWL”) and United States Dollar (“US$”). The functional currency of the Authority is United States Dollars.
Notes to the annual financial statements

2 Summary of significant accounting policies (continued)

(c) Foreign currency translation (continued)

(i) Functional and presentation currency (continued)

Comparative statement of financial position items on the Zimbabwean ledger have been translated on a 1:1 ratio from United States Dollars ("US$") to the Zimbabwe Dollar ("ZWL") as provided for in SI 33 and SI 142 of 2019 respectively as at 1 January 2019 and, thereafter translated using the closing exchange rate at the end of 2019. Consequently, the closing US$ balances for 2018 have been used as the ZWL comparative information for 2018 converted on a 1:1 basis, as there was no ZWL prior to February 2019. Income statement items on the other hand have been translated at an average rate as provided for in IAS 23.

Any differences arising from this process have been recognised in other comprehensive income and accumulated in the translation reserve in equity.

Equity items have been translated at the closing exchange rate. Exchange differences arising on retranslating equity items and opening net assets have been transferred to the translation reserve within equity.

(ii) Transactions and balances

Foreign currency transactions are translated into the functional currency using the exchange rates prevailing at the dates of the transactions or valuations where items are re-measured. Foreign exchange gains and losses resulting from the settlement of such transactions and from the translation at year-end exchange rates of monetary assets and liabilities denominated in foreign currencies are recognised in the income statement.

Foreign exchange gains and losses that relate to borrowings and cash and cash equivalents are presented in income and expenditure within ‘finance income or cost’. All other foreign exchange gains and losses are presented in income or expenditure within ‘other income or expenses’.

(d) Revenue recognition

Revenue comprises the fair value of the consideration received or receivable for the sale of goods and services in the ordinary course of the Authority’s activities.

The Authority identifies contracts with customers, the performance obligations within it, the transaction price, and its allocation to the performance obligations. Revenue is recognised when control of the product passes to the customer and is measured based on expected consideration. It is the Authority’s policy to recognise revenue from a contract when it has been approved by both parties, rights have been clearly identified, payment terms have been defined, the contract has commercial substance, and collectability has been ascertained as probable.

Collectability of customer’s payments is ascertained based on the customer’s historical records, guarantees provided, the customer’s industry and advance payments made if any.

Water Sales Revenue is a product of the following:
- Water used as measured using flow meter equipment
- The agreed annual fixed charge
- The variable charge

Disaggregation of revenue from contract with customers

The Authority derives revenue from one source i.e. sale of water to Kariba Hydro Power Company (KHPC) and ZESCO Limited (ZESCO). The Authority has determined that the disaggregation of revenue based on the criteria of type of products meets the revenue disaggregation disclosure requirement of IFRS 15 as it depicts how the nature, amount, timing and uncertainty of revenue and cash flows are affected by economic factors. See further
Notes to the annual financial statements

2 Summary of significant accounting policies (continued)

(e) Other income

Other income is recognised on an accruals basis in accordance with the substance of the relevant agreements.

(f) Interest income

Interest income is recognised using the effective interest method.

(g) Rental income

Rental income from properties is recognised in the income and expenditure on a straight-line basis over the term of the relevant lease agreement.

(h) Property, plant, and equipment

Land and buildings are recognised at fair value based on periodic, but at least triennial, valuations by external independent valuers, less subsequent depreciation for buildings. A revaluation surplus is credited to revaluation reserve. All other property, plant and equipment is stated at historical cost less accumulated depreciation. Historical cost includes expenditure that is directly attributable to the acquisition of the items.

Construction work in progress is carried at cost and is not depreciated until the asset is brought into use.

Subsequent costs are included in the asset’s carrying amount or recognised as a separate asset, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Authority and the cost of the item can be measured reliably. The carrying amount of any component accounted for as a separate asset is derecognised when replaced. All other repairs and maintenance are charged to income and expenditure during the reporting period in which they are incurred.

Increases in the carrying amounts arising on revaluation of buildings are recognised in other comprehensive income and accumulated in the revaluation reserve. To the extent that the increase reverses a decrease previously recognised in income and expenditure, the increase is first recognised in income and expenditure. Decreases that reverse previous increases of the same asset are first recognised in other comprehensive income to the extent of the remaining surplus attributable to the asset; all other decreases are charged to income and expenditure. Each year, the difference between depreciation based on the revalued carrying amount of the asset charged to income and expenditure and depreciation based on the asset’s original cost is reclassified from the property, plant, and equipment revaluation surplus to revenue reserve.

Land is not depreciated. Depreciation on other assets is calculated using the straight-line method to allocate their cost or revalued amounts to their residual values over their estimated useful lives, as follows:

<table>
<thead>
<tr>
<th>Asset Category</th>
<th>Depreciation Rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>Buildings</td>
<td>2.5%</td>
</tr>
<tr>
<td>Kariba Dam Complex</td>
<td>2.5%</td>
</tr>
<tr>
<td>Motor Vehicles</td>
<td>25%</td>
</tr>
<tr>
<td>Equipment and Machinery</td>
<td>10 - 20%</td>
</tr>
<tr>
<td>Furniture and Fittings</td>
<td>20%</td>
</tr>
<tr>
<td>Computers</td>
<td>25%</td>
</tr>
</tbody>
</table>

The assets’ residual values and useful lives are reviewed, and adjusted if appropriate, at the end of each reporting period. An asset’s carrying amount is written down immediately to its recoverable amount if the asset’s carrying amount is greater than its estimated recoverable amount. Property, plant, and equipment are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognised for the amount by which the asset’s carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset’s fair value less costs to sell...
and value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash-generating units).

**Notes to the annual financial statements**

2  

**Summary of significant accounting policies (continued)**

**h) Property, plant, and equipment (Continued)**

Non-financial assets that suffered impairment are reviewed for possible reversal of the impairment at each reporting date.

Gains and losses on disposals are determined by comparing the proceeds with the carrying amount and are included in income and expenditure. When revalued assets are sold, the amounts included in the revaluation reserve relating to that asset are transferred to retained earnings.

**(i) Investment Property**

Property that is held for long-term rental yields or for capital appreciation or both, and that is not occupied by the Authority is classified as investment property. Investment property also includes property that is being constructed or developed for future use as investment property.

All investment property is stated at historical cost less accumulated depreciation. Historical cost includes expenditure that is directly attributable to the acquisition of the items. Subsequent expenditure is capitalised to the asset’s carrying amount only when it is probable that future economic benefits associated with the expenditure will flow to the Authority and the cost of the item can be measured reliably. All other repairs and maintenance costs are expensed when incurred. When part of an investment property is replaced, the carrying amount of the replaced part is derecognised.

Depreciation on investment property is calculated using the straight-line method to allocate their cost to their residual values over their estimated useful lives over 40 years.

Investment properties are derecognised when they have been disposed. If an investment property becomes owner-occupied, it is reclassified as property, plant, and equipment. Its fair value at the date of reclassification becomes its cost for subsequent accounting purposes.

If an item of owner-occupied property becomes an investment property because its use has changed, any difference resulting between the carrying amount and the fair value of this item at the date of transfer is treated in the same way as a revaluation under IAS 16. Any resulting increase in the carrying amount of the property is recognised in income statement to the extent that it reverses a previous impairment loss, with any remaining increase recognised in other comprehensive income and increase directly to equity in revaluation surplus within equity. Any resulting decrease in the carrying amount of the property is initially charged in other comprehensive income against any previously recognised revaluation surplus, with any remaining decrease charged to income and expenditure.

**(j) Inventories**

Inventories are stated at the lower of cost and net realisable value. Cost is determined using the average cost method. Net realisable value is the estimated selling price in the ordinary course of business, less applicable variable selling expenses.

**(k) Financial Instruments**

Financial instruments comprise trade and other receivables (excluding prepayments), financial assets at fair value through profit or loss, cash and cash equivalents, borrowings, other non-current liabilities (excluding provisions) and trade and other payables.
Financial assets and liabilities are recognised in the Authority’s statement of financial position when the Authority becomes a party to the contractual provisions of the instruments.

Notes to the annual financial statements

2

Summary of significant accounting policies (continued)

(k) Financial Instruments (continued)

All financial assets and liabilities are initially measured at fair value, including transaction costs except for those classified as at fair value through profit or loss which are initially measured at fair value, excluding transaction costs. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities at fair value through profit or loss are recognised immediately in income and expenditure. Financial assets are recognised (derecognised) on the date the Authority commits to purchase (sell) the instruments (trade date accounting).

Financial assets and liabilities are classified as current if expected to be realised or settled within 12 months; if not, they are classified as non-current.

(i). Offsetting financial instruments

Offsetting of financial assets and liabilities is applied when there is a legally enforceable right to offset the recognised amounts and there is an intention to settle on a net basis or realise the asset and settle the liability simultaneously. The net amount is reported in the statement of financial position.

(ii). Financial instrument classification

The Authority classifies financial assets on initial recognition as measured at amortised cost, or fair value through profit or loss on the basis of the Authority’s business model for managing the financial asset and the cash flow characteristics of the financial asset. The Authority classifies its financial instruments into the following categories:

Amortised cost

The asset is held within a business model with the objective to collect the contractual cash flows; and the contractual terms give rise on specified dates to cash flows that are solely payments of principal and interest on the principal outstanding.

Financial assets are not reclassified unless the Authority changes its business model. In rare circumstances where the Authority does change its business model, reclassifications are done prospectively from the date that the Authority changes its business model.

(iii). Financial liabilities are classified as measured at amortised cost.

(iv). Subsequent measurement

Subsequent to initial recognition, financial instruments are measured as described below.

Financial assets at fair value through profit and loss: These financial assets are subsequently measured at fair value and changes therein (including any interest or dividend income) are recognised in income and expenditure.

Financial assets at amortised cost: These financial assets are subsequently measured at amortised cost using the effective interest method, less any impairment losses. Interest income, foreign exchange gains and losses and impairments are recognised in income and expenditure. Any gain or loss on derecognition is recognised in income and expenditure.
Financial liabilities comprise trade and other payables, borrowings, and other non-current liabilities (excluding provisions). All financial liabilities are subsequently measured at amortised cost using the effective interest method.
Notes to the annual financial statements

2 Summary of significant accounting policies (Continued)

(k) Financial Instruments (Continued)

(v). De-recognition

Financial assets are derecognised when the rights to receive cash flows from the assets have expired or have been transferred and the Authority has transferred substantially all risks and rewards of ownership. Financial liabilities are derecognised when the obligations specified in the contracts are discharged, cancelled, or expires.

(vi). Substantial modification

A substantial modification of the terms of an existing debt instrument or part of it is accounted for as an extinguishment of the original debt instrument and the recognition of a new debt instrument. Substantial modification (continued). Gains or losses arising from the modification of the terms of a debt instrument are recognised immediately in income and expenditure where the modification does not result in the derecognition of the existing instrument.

(vii). Impairment

Under IFRS 9 the Authority calculates allowance for credit losses as expected credit losses (ECL’s) for financial assets measured at amortised cost and contract assets. ECL’s are a probability weighted estimate of credit losses. Credit losses are measured as the present value of all cash shortfalls (i.e. the difference between the cash flows due to the entity in accordance with the contract and the cash flows that the Authority expects to receive). ECLs are discounted at the original effective interest rate of the financial asset.

The Authority applies the simplified approach to determine the ECL for trade receivables and contract assets. This results in calculating lifetime expected credit losses for trade receivables and contract assets. ECL for trade receivables is calculated using a provision matrix. Refer to note 21 for more detail about ECL and how this is calculated.

(l) Trade receivables

Trade receivables are amounts due from customers for services rendered in the ordinary course of business. If collection is expected in one year or less (or in the normal operating cycle of the business if longer), they are a classified as current asset. If not, they are presented as non-current assets.

Trade receivables are recognised initially at fair value and subsequently measured at amortised cost using the effective interest method less provision for impairment.

(m) Cash and cash equivalents

Cash and cash equivalents include cash in hand, deposits held at call with banks, other short term highly liquid investments with original maturities of three months or less.

(n) Borrowings

Borrowings are initially recognised at fair value, net of transaction costs incurred. Borrowings are subsequently measured at amortised cost. Any difference between the proceeds (net of transaction costs) and the redemption amount is recognised in income and expenditure over the period of the borrowings using the effective interest method. Fees paid on the establishment of loan facilities are recognised as transaction costs of the loan to the extent that it is probable that some or all of the facility will be drawn down. In this case, the fee is deferred until the draw down occurs. To the extent there is no evidence that it is probable that some or all of the facility will be drawn down, the fee is capitalised as a prepayment for liquidity services and amortised over the period of the facility to which it relates.
2 Summary of significant accounting policies (Continued)

(n) Borrowings (continued)

Borrowings are removed from the statement of financial position when the obligation specified in the contract is discharged, cancelled or expired. The difference between the carrying amount of a financial liability that has been extinguished or transferred to another party and the consideration paid, including any non-cash assets transferred or liabilities assumed, is recognised in income and expenditure as other income or finance costs. Borrowings are classified as current liabilities unless the Authority has an unconditional right to defer settlement of the liability for at least 12 months after the reporting period.

(n) Borrowing costs

General and specific borrowing costs that are directly attributable to the acquisition, construction or production of a qualifying asset are capitalised during the period of time that is required to complete and prepare the asset for its intended use or sale. Qualifying assets are assets that necessarily take a substantial period of time to get ready for their intended use or sale.

Other borrowing costs are expensed in the period in which they are incurred.

(o) Trade payables

These amounts represent liabilities for goods and services provided to the Authority prior to the end of financial year which are unpaid. The amounts are unsecured and are usually paid within 30 days of recognition. Trade and other payables are presented as current liabilities unless payment is not due within 12 months after the reporting period. They are recognised initially at their fair value and subsequently measured at amortised cost using the effective interest method.

(p) Employee benefits

(i) Retirement benefit obligations

The Authority subscribes to defined contribution schemes for the benefit of its permanent and pensionable staff. The funds are managed by Prudential Insurance for the Zambian employees and Zimnat life Assurance for the Zimbabwean employees. Both funds are overseen by a Board of Trustees composed of management and employee representative trustees.

A defined contribution plan is a pension plan under which the Authority pays fixed contributions into a separate entity. The Authority has no legal or constructive obligations to pay further contributions if the fund does not hold sufficient assets to pay all employees the benefits relating to employee service in the current and prior periods.

The Authority’s contributions to the defined contribution schemes are charged to income and expenditure in the period to which they relate. The Authority has no further obligation once contributions have been paid.

The Authority and all its employees contribute to the appropriate National Social Security Funds in the two Contracting States, which are defined contribution schemes.

(ii) Termination benefits

Termination benefits are payable when employment is terminated by the Authority before the normal retirement date, or whenever an employee accepts voluntary redundancy in exchange for these benefits. The Authority recognises termination benefits at the earlier of the following dates: (a) when the Authority can no longer withdraw the offer of those benefits; and (b) when the entity recognises
costs for a restructuring that is within the scope of IAS 37 and involves the payment of termination benefits.

Notes to the annual financial statements

2  Summary of significant accounting policies (Continued)

(p) Employee benefits (continued)

(ii) Termination benefits (continued)

In the case of an offer made to encourage voluntary redundancy, the termination benefits are measured based on the number of employees expected to accept the offer.

(q) Grants

Grants are not recognised until there is reasonable assurance that the Authority will comply with the conditions attaching to them and that the grants will be received. Grants whose primary condition is that the Authority should purchase, or otherwise acquire non-current assets are recognised as capital grants in the statement of financial position and transferred to income and expenditure on a systematic and rational basis over the useful lives of the related assets. Other grants are recognised as deferred revenue over the periods necessary to match them with the costs for which they are intended to compensate, on a systematic basis.

Compensations for expenses or losses already incurred or for the purpose of giving immediate financial support to the Authority with no future related costs are recognised in income and expenditure in the period in which they become receivable.

(r) Income tax

The Authority is exempted from paying taxes on capital, income, or profit under Articles 17 and 19 of the Zambezi River Authority Acts, 1987 of Zambia and Zimbabwe respectively. As such no allowance is made for current or deferred taxes

(s) Comparatives

Where necessary, prior year comparatives have been reclassified in line with current year presentation.

3. Critical accounting estimates and judgements

Estimates and judgements are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Critical estimates made include the following:

Buildings

The Authority owns land and buildings classified either as residential or commercial properties. The said properties are carried at valuation with the valuation exercise performed triennially. The valuation is conducted by professional external valuers, who apply various techniques that consider among other things:

- Location
- Value of surrounding properties
- Impact of planned investments in the area

The land and buildings were revalued in 2018 using the sales comparison approach based on recent sales of comparable properties in the area.
Notes to the annual financial statements

### 4 Segmental Reporting

The Authority operates in two geographical segments i.e. Zambia and Zimbabwe. An operating segment is a component of the Authority for which discrete financial information is available; engages in business activities (earns revenue, incurs expenses); and for which operating results are regularly reviewed to assess performance and to make resource allocation decisions (to the segment). The Authority currently derives its revenues from water sales to ZESCO Limited and Kariba Hydro Power Company (Pvt) Limited (“KHPC”). The Chief Executive is presented with the results of each segment for the purposes of resource allocation and assessment of the results of each segment.

#### Segment performance:

The operating income is based on water tariffs charged based on the water consumed in the generation of electricity as invoiced to the two utility companies, ZESCO Limited and Kariba Hydro Power Company (Pvt) Ltd. The formula used is intended to provide the Authority with sufficient revenues to carry out its mandate and not to generate profits.

Segment information is presented in respect of the Authority’s business. The primary format is based on the Authority’s geographical segments and then on the management and internal reporting structure. Segment results presented below are based on income and expenses directly attributable to a segment as well as those that can be allocated on a reasonable basis.

All the revenues of the Authority are recognised at a point in time.

a) Water sales

The Authority uses a formula for the sale of water to ZESCO Limited ("ZESCO") and Kariba Hydro Power Company (Pvt) Limited ("KHPC") which was adopted in 1998. The formula was derived to ensure the costs associated with the operations of the Authority were covered by the fees charged to ZESCO Limited and KHPC (Pvt) Limited.

The fees chargeable are contained in a tripartite Water Purchase Agreement signed between the Authority and the Utilities and are split between a fixed charge and a variable charge which is dependent on the cubic meters of water dispensed through the generators. In the year 2019, the Authority applied a 2% increment on the variable charge as per the said agreement.

b) Water allocation

During the year ended 31 December 2019, the Authority allocated a total of 34 bm³ of water to be shared equally between the Utilities for purposes of power generation. The Utilities’ combined usage in the year was 36.02 bm³ resulting in overutilisation of 5.9%. Of this overutilisation KHPC (Pvt) Limited contributed 0.22 bm³ whereas, ZESCO Limited contributed 1.22 bm³ translating to 1.3% and 10.3% respectively. Accordingly, an over utilisation penalty of US$ 1.196 million was levied on ZESCO Limited. There was, however, no charge on KHPC (Pvt) Limited as the Utility did not breach the 5% threshold as detailed in (c) below.

c) Over utilisation

When there is over utilisation of water above annual base allocation, the following penalties apply;

i. Over utilisation by up to 5% of annual allocation, no penalty shall be chargeable;
ii. Over utilisation of up to 20% of annual allocation, extra volume shall be charged at a water tariff in US$/m³ x 1.5
iii. Over utilization by over 20% of annual allocation, extra volume shall be charged at a water tariff in US$/m³ x 2

Construction work in progress relates to Expenditure on the Batoka Hydroelectric Scheme project, the Kariba Dam rehabilitation project, ICT network overall and Kariba Dam information offices.
**Notes to the annual financial statements**

### 9 Property, plant, and equipment (continued)

The Authorities’ head office building and residential properties were revalued as at 31 December 2018 by respective Government Valuation Department independent professionally qualified valuers, who hold recognised relevant professional qualifications and have recent experience in the locations and segments of the properties valued. Valuations were based on Open Market Value approach based on current prices of similar properties. The key inputs under this approach are the price per square metre from current year sales of comparable lots of property in the area (location and size). It is the Authority’s accounting policy to revalue properties after every three years.

If land and buildings were stated on the historical cost basis, the amounts would be as follows:

<table>

The investment property is carried at cost because their fair values cannot be reliably determined on a continuing basis. Comparable market transactions are infrequent and alternative reliable estimates of fair value are not available.
unreliable. This is due to the location of the investment properties.

The long-term investments are held with the Commercial Bank of Zimbabwe (CBZ) with an average tenor of 10 years and yielding a return of 5% per annum. The investments were impaired following the change of currency in Zimbabwe enacted through Statutory Instrument (SI)Number 33 of 2019. The SI deemed that for accounting and other purposes all assets and liabilities that were valued in US$ immediately before 22 of February 2019 were to be valued in RTGS Dollars at a rate of 1:1. On 24th June 2019 the Government of the Republic of Zimbabwe introduced the Zimbabwe Dollar (“ZWL”) to whose reference, Bond notes and the RTGS Dollar would conform, as the sole legal tender. The ZWL is tradable on the inter-bank market and closed at ZWL 17.24 at the end of the year 2019 implying that in US$ terms that CBZ investment had lost US$ 838 of its value.

The investment in Madison Asset Management Company (MAMCO) Limited is a short-term investment for gratuity for employees. The Authority drew down all its principle investment to meet gratuity obligations that were paid in the year. The return earned in 2019 was US$48,196 representing approximately 5% compared to US$53,982 which translated to 3% earned in 2018. The balance on the investment represents investment return yet to be remitted to the Authority by MAMCO.

On 2 February 2020 the Securities and Exchange Commission (SEC) took over operations of MAMCO in order to assure the investing public of the safety of their funds. The Authority will be engaging the interim managers to...
ascertain the way forward. Given the SEC’s action Management’s assessment is that, the funds are recoverable but, can only ascertain the timing after engaging the interim managers appointed to conduct an assessment of the asset liability matching gap MAMCO.

(i) Classification as trade and other receivables

Trade receivables are amounts due from Utilities for water sales arising in the ordinary course of business. Trade and other receivables are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. If collection of the amounts is expected in one year or less, they are classified as current assets. If not, they are presented as non-current assets. Trade receivables are generally due for settlement within 45 days and therefore are all classified as current. The Authority’s other accounting policies for trade and other receivables are outlined below:

(ii) Other receivables

These amounts generally arise from transactions outside the usual operating activities of the Authority. Interest is not charged on these amounts and neither is collateral normally obtained.

(iii) Staff debtors

These relates to car and housing loans which carry interest rates of 6% and 10% per annum respectively. As at year end, these have been fair valued using the market related interest rates for similar loans.

(iv) Fair values of trade and other receivables

Due to the short-term nature of the current receivables, their carrying amount is considered to be the same as their fair value.

In the statement of cash flows, cash and cash equivalents include cash in hand, deposits held at call with banks, other short-term highly liquid investments with original maturities of three months or less.

**Cash flow information: Net debt reconciliation**

Amendments to IAS 7: Effective 1 January 2017, now requires entities to explain changes in their liabilities arising from financing activities. This includes changes arising from cash flows (e.g. drawdowns and repayments of borrowings) and on cash changes such as acquisitions, disposals, accretion of interest and unrealised exchange differences. Below is the tabular presentation of the movements in the Authority's net debt movement reconciliation. In the year under review, US$ 3,713,616 was drawn from the International Development Association ("IDA"), World Bank US$ 75 million loan facility while US$ 4,539,738 was drawn from the African Development Bank Group AFDB facility for US$ 39 million.

</tr>
</tbody>
</table>

Restricted cash refers to cash balances held in Zimbabwean banks. The funds are treated as Restricted funds due to the Authority’s inability to readily access United States Dollar to be applied to activities such as servicing of loan obligations and foreign currency denominated obligations to contractors working on the various projects currently underway. In 2019, the Authority was only able to access US$ 3,000,000 against the said funds.

World Bank IDA

In February 2015, the International Development Association (“IDA”) made available to the Government of the Republic of Zambia (“GRZ”) a credit facility worth US$75,000,000 for the rehabilitation of the Kariba Dam. In August 2015, the GRZ agreed to on-lend the proceeds of the credit to the Authority. The interest rates applicable are at 2% per annum on withdrawn amounts with a repayment period of 30 years, including a grace period of 2 years on repayment of the principal. In the year under review, the Authority drew US$ 3,713,616.

US$ 1,073,914 was paid directly to Stucky; the consultant engaged to provide Technical and Supervisory services to the KDRP and, US$ 420,311 was paid directly to the panel of experts engaged on the same Project. US$ 2,219,391 was paid to the Consortium of General Electric – France and Freyssinet International who on 24 May 2019 were awarded the contract to rehabilitate the Spillway at a total cost of US$ 53,684,000.

African Development Bank Group AFDB

The Authority also has a credit facility from the AFDB through the GRZ dated February 2015, amounting to US$ 39,000,000 for the rehabilitation of the Kariba Dam. The interest rates applicable are at 2% per annum, on withdrawn amounts. The Authority commenced making principal repayments on the facility in 2017, following a 2 years grace period.

In the year under review US$ 4,539,738 was drawn from this facility and applied towards advance payments to the Consortium of General Electric – France and Freyssinet International engaged on the Spillway Rehabilitation.

Breach of the terms of loans agreement

The Authority has a 30-year subsidiary loan agreement dated 20 August 2015 with the Government of the Republic of Zambia for a loan amount of US$ 144 million to finance the Kariba Dam Rehabilitation Project. According to schedule 1 of this subsidiary loan agreement, the Authority is required to make repayments biannually on 1 March and 1 September. The Authority has in the current financial year defaulted on loan repayments totalling US$ 8,920,000 having paid only US$ 2,000,000. The amount in default is made up of current year repayments of US$ 5,947,000 (principal of US$ 3,800,000 and interest of US$ 2,147,000) and 2018 principal arrears of US$ 2,973,000. On 1 March 2020 US$ 2,945,000 will fall due (principal of US$ 1,900,000 and interest of US$ 1,045,000), bringing the total amount outstanding to US$ 11,865,000. This is in contravention of section 3.04(ii) of Article III of the subsidiary loan agreement which states that repayments should not be delayed by more than 30 days from due date and failure of which the Government of Zambia has the right to cancel the loan agreement in accordance with Section 5.03 of Article V of the subsidiary loan agreement. The Authority has engaged both the Zambian and Zimbabwean Governments highlighting the challenges in settlement of the said obligation due to delayed payments from ZESCO Limited and failure to access the United States Dollars in Zimbabwe. The Council of Ministers has elected to resolve the Authority’s liquidity challenges to enable it to settle its obligation to the Zambian Government.

The carrying amounts of trade and other payables are considered to be the same as their fair values, due to their short-term nature.

19 Capital Grants

The Authority has one grant facility for the Batoka Gorge Hydro - Electric Scheme (BGHES) and three grants financing the Kariba Dam Rehabilitation Project (KDRP) and they are briefly described below:

a) Batoka Gorge Hydro - Electric Scheme (BGHES)

The International Development Association (IDA) of the World Bank acting as administrator of the Co-operation in International Waters in Africa Trust Fund (CIWA) provided a grant of US$6,000,000 to be drawn down on direct payment requests as well as reimbursements. The objective of the Project is to advance the preparation of the Batoka Gorge Hydro –electric Scheme and strengthen cooperation development within the Zambezi River Basin.

Funds from this grant have been applied towards the updating of engineering feasibility studies, environment impact assessment studies and the finance, legal and transaction advisory contracts on the Batoka Hydro Electric Scheme. In the year 2019 US$ 846,359 was disbursed towards engineering feasibility studies.

The CIWA grant has since expired and the balance that was held in the designated account totalling US$ 146,159 was transferred back to the World Bank.

(b) Kariba Dam Rehabilitation Project (KDRP)

The Authority has three grant facilities for the KDRP as below:

i. **Swedish International Development Agency Trust Fund (SIDA)** - The International Development Association acting as administrator of the Swedish International Development Agency (SIDA) Trust Fund provided a grant of a maximum of US$25,000,000 to finance the rehabilitation of the Kariba Dam. The grant is to be accessed through direct payment requests as well as requests for reimbursements. In the financial year 2019, US$ 4,272,226 was accessed from this facility and US$ 1,444,266 was applied towards Dam Break Analysis and Lidar Survey works while US$ 2,827,960 was paid as advance payment to the Consortium of General Electric- France and Freyssinet International.

ii. **African Development Bank (AFDB)** – On 20 February 2015, the AFDB availed a grant facility through the two contracting states i.e. Zambia and Zimbabwe for the financing of specific foreign payments on the Kariba Dam Rehabilitation project under the Transitional Support Facility (TSF). In 2019, the Authority drew a total of US$ 1,119,893 and applied US$ 645,798 towards technical supervision and US$ 474,095 applied to advance payments for the spillway rehabilitation.
Notes to the annual financial statements

19 Capital Grants (Continued)

iii. European Union (EU) – The EU through the European Development Fund Bridging Facility has given the Authority through the Government Republic of Zambia (GRZ) a grant of up to EUR 74,000,000 towards the rehabilitation of the Plunge Pool at the Kariba Dam. During the year ended 31 December 2019, US$ 2,192,421 was disbursed through direct payments under this facility to Razelbec, the contractor engaged on the Plunge pool.

21 Financial Risk Management Objectives and Policies

The Authority’s activities expose it to a variety of financial risks: market risk (including foreign exchange risk and interest rate risk), credit risk and liquidity risk. The Authority’s overall risk management programme focuses on the assessment of the liquidity positions of key customers and the unpredictability of financial markets and seeks to minimise potential adverse effects on its financial performance and position.

Financial risk management is carried out by the finance department under policies approved by the Board of Directors. The policies are imbedded in the overall enterprise risk management policy of the Authority.

(i) Foreign exchange risk

The Authority primarily generates its revenue in United States Dollar but does from time to time meet some of its obligations in Zambian Kwacha, the Zimbabwe Dollar and, other major convertible currencies through payments for goods and services needed for the day to day operations. Foreign exchange risk arises when future recognised assets or liabilities are denominated in a currency that is not the entity’s functional currency. Management’s policy to manage foreign exchange risk is to hold foreign currency bank accounts which act as a natural hedge for meeting foreign currency denominated expenses.

At 31 December 2019, if the either the Zambian Kwacha or the Zimbabwe Dollar had weakened/strengthened by 4% against the United States Dollar with all other variables held constant, operating deficit and accumulated reserves for the Authority would have been ZMW 0.468 million (US$0.0321 million (2018: ZMW 0.427 million US$0.037 million) and ZWL 0.578 million (US$0.0467 million) higher or lower than the 2019 result.
Notes to the financial statements

Financial risk management objectives and policies (continued)

rest rate risk

The Authority’s interest rate risk arises from long-term borrowings contracted for the Kariba dam rehabilitation project. Borrowings issued at concessional fixed interest rates, but with a clause for default penalties expose the Authority’s to cash flow interest rate risk. Management manages this risk by ensuring sufficient liquidity to meet loan obligations when they fall due. As at 31 December 2019, an increase/decrease of 200 (2018: 200) basis points on US$ did not have a material impact on the operating deficit and accumulated reserves.

Credit risk

Credit risk arises from cash and cash equivalents and deposits with banks and financial institutions, as well as credit exposure to customers, including outstanding receivables.

Risk management

The Authority assesses the credit quality of each customer, taking into account its financial position, past experience, and other factors. Individual risk limits are set based on internal or external ratings in accordance with limits set by the Board. The utilisation of credit limits is regularly monitored. The compliance with credit limits by customers is regularly monitored by line management.

For cash and cash equivalent balances, the Authority’s exposure and credit ratings of counterparties are regularly monitored, and the aggregate value of transactions spread amongst approved financial institutions. The Authority actively seeks to limit the amount of credit exposure to any one financial institution and credit exposure is controlled by counterparty limits that are reviewed and approved by the Treasury. For banks and financial institutions, only independently rated parties with a minimum rating of ‘A’ for International and regional banks with a local presence are accepted.

The Authority has significant concentrations of credit risk as it has two main customers which are ZESCO Limited and KHPC. The continued increase in the receivables balances with the Utilities is a clear indication that the credit risk is now at the fore of the financial risks that the Authority has struggled to bring under control. This has had spill over effects on the liquidity situation that has deteriorated as a consequence.

Impairment of financial assets

The Authority’s financial assets that are subject to the expected credit loss model are trade and other receivables and Long term investments. Cash and cash equivalents is also subject to impairment requirements of IFRS 9 but the identified impairment loss was immaterial.

The Authority applies the IFRS 9 simplified approach to measuring expected credit losses which uses a lifetime expected loss allowance for all the trade receivables and long term investments. To measure the expected credit losses, trade receivables and long term investments have been grouped based on shared credit risk characteristics and days past due.

The expected loss rates are based on the payment profiles of collections over a period of 36 months before 31 December 2019 or 1 January 2019 respectively and the corresponding historical credit losses experienced within this period. The historical loss rates are adjusted to reflect current and forward-looking information on macroeconomic factors affecting the ability of the customers to settle the receivables.

On that basis, the loss allowance as at 31 December 2019 was determined as follows for trade and other receivables and long term investments:

Trade receivables are written off when there is no reasonable expectation of recovery. Indicators that there is no reasonable expectation of recovery include, amongst others, the failure of a debtor to engage in a repayment plan with the Authority, and a failure to make contractual payments for a period of greater than 120 days past due. Impairment losses on trade receivables are presented as net impairment losses within operating profit. Subsequent recoveries of amounts previously written off are credited against the same line item.

Staff debtors are ordinarily not expected to pose a significant recovery risk as they are usually recovered through the payroll. In the unlikely event of loss, the impairment provisioning will follow the same procedures applied to trade and other debtors.
Financial risk management objectives and policies (continued)

**Liquidity risk**

Liquidity risk is the risk that the Authority will not be able to meet its financial obligations as they fall due. Prudent liquidity risk management includes maintaining sufficient cash balances, and the availability of funding from an adequate amount of committed credit facilities.

The table below analyses the Authority’s financial liabilities that will be settled on a net basis into relevant maturity groupings based on the remaining period at the reporting date to the contractual maturity date. The amounts disclosed in the table below are the contractual undiscounted cash flows.

(d) Fair value estimation

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. The fair value of financial assets and liabilities traded in active markets (such as publicly traded equity) are based on quoted market prices at the close of trading on the reporting date.

The carrying amounts of all financial assets and liabilities at the reporting date approximate their fair values. The following table presents the Authority’s assets that are measured at fair value:

<table>

<td>8,837</td>
</tr>
</tbody>
</table>

The different level of fair value measurement hierarchy is described as follows:

- Quoted prices (unadjusted) in active markets for identical assets (level 1)
- Inputs other than quoted shares included in level 1 that are observable for the asset, either directly (that is, as prices) or indirectly (that is, derived from prices) (level 2)
- Inputs for the assets that are not based on observable market data (that is, unobservable data) (level 3)

All fair value measurements disclosed are recurring fair value measurements, required for the purposes of measuring the Authority’s assets at fair value. During the year no transfers were made amongst the different levels.
Notes to the annual financial statements

22 Capital management

The Authority’s objectives when managing capital are to safeguard the Authority’s ability to continue as a going concern. Adequacy of the capital of the Authority is maintained by the Authority on a regular basis. As and when required the Authority will through the respective Ministries responsible for Finance, source for funding in the form of loans and grants.

23 Contingent liabilities

The Authority has some cases in the courts of law, most of which have already been decided in the Authority’s favour and are only back in the courts on appeal by the plaintiffs. No contingent liabilities have been provided for as management believe that these are remote.

24 Related party transactions

The Authority was constituted by the Zambezi River Authority Acts 1987 of Zambia and Zimbabwe and, is a common enterprise between the Governments of the Republics of Zambia and Zimbabwe. Control of the entity is on a 50/50 basis with decisions being made by consensus.

Oversight of the Authority is vested in the Council of Ministers (CoM). Internal supervision of its management and control of the affairs of the Authority, however, is vested in the Board and the key executive officers.

The Authority is key management is made up of the Executive Management which includes the Chief Executive and four Directors.

The following transactions were carried out with related parties:

Zambezi Valley Development Fund (ZVDF) is a trust established as a corporate social arm to mitigate the legacy effects on the communities that were displaced during the construction of the Kariba Dam. Zambezi River Authority operates as a secretariat to the ZVDF and together with the power Utilities pays 1% of its water sales revenue in support of the operations of ZVDF.
